Abstract—A revision of Palaearctic *Urophora* (White and Korneyev, 1989; Merz and White, 1991; Korneyev and White, 1991, 1992, 1993, 1996, 1999; Korneyev and Merz, 1998) is completed. A total of 69 species of the genus *Urophora*, attributed to the subgenera *Myopitora* Korneyev et White (1 species), *Eurasimona* Korneyev et White (2 species), *Asimoneura* Czerny (1 species), *Inuromaesa* Korneyev et White (2 species), *Promyopites* Korneyev (1 species), and *Urophora* R.-D. (56 species), are recorded from Palaearctic. The taxonomic status of 6 species remains to be confirmed. The phylogenetic relationships of the species assigned to *Urophora* s. str. are discussed; a list of host plants of Palaearctic species and a list of references cited in the previous parts of this paper are provided.
