Received December 29, 2000

**Abstract**—A key to *Depressaria* species, based on the female genitalia, is given. Descriptions of 29 species, including characters of moths and larvae, and data on their host plants and distribution are given. A new synonymy is established: *Depressaria ruticola* Christoph, 1873 = *D. despoliatella* Erschoff, 1874, **syn. n.** A new subspecies, *Depressaria pimpinellae asiatica* subsp. n., is described. Sixty-three species of the genus *Depressaria* are known from the territory of the former USSR.
