**Abstract**—The effect of fluorine atoms in the benzene ring on the photophysical properties of 2-methyl-6,7-difluoro-8-hydroxyquinoline is studied.

**Keywords:** 2-methyl-6,7-difluoro-8-hydroxyquinoline, absorption spectrum, excitation spectrum, fluorescence, frontier orbitals

**DOI:** 10.1134/S1070363215070099
