**Abstract**—The reduction of 8-methyl-5-methylsulfanylmethyl-3-thiabicyclo[3.3.1]non-7-en-6-one with aluminum hydride, lithium tetrahydridoaluminate, or lithium tris(*tert*-butoxy)hydridoaluminate in tetrahydrofuran gave 8-methyl-5-methylsulfanylmethyl-3-thiabicyclo[3.3.1]non-7-en-6-ol. 8-Methyl-5-methylsulfanylmethyl-3-thiabicyclo[3.3.1]nonan-6-ol was obtained by reduction of the title compound with sodium tetrahydridoborate in pyridine or dimethylformamide. The reaction of 8-methyl-5-methylsulfanylmethyl-3-thiabicyclo[3.3.1]non-7-en-6-one with hydroxylamine hydrochloride afforded the corresponding oxime.
