|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Polarization Losses in Gratzel Solar Cells with a Porous Anode<br><i>V. G. Gasenko and V. E. Nakoryakov</i>                                                                                                                 | 129 |
| The 21st Century Power: Tendencies and Prospects<br><i>N. P. Zapivalov</i>                                                                                                                                                  | 139 |
| Thermal Erosion of Metal Surfaces under the Action<br>of Fine-Focused Scanning Electron Beams<br><i>G. A. Bleykher and V. P. Krivobokov</i>                                                                                 | 152 |
| Numerical Simulation of Turbulent Natural Convection of Oxide Heat<br>Generating Melt in a Core Catcher at NPP with VVER-1000<br><i>A. S. Filippov</i>                                                                      | 161 |
| Wave Motion of Incompressible Turbulent Fluid<br><i>D. Ph. Sikovsky</i>                                                                                                                                                     | 174 |
| Two Types of Spherical Stratified Gas Discharge<br><i>A. E. Belikov, S. A. Novopashin, and S. Z. Sakhapov</i>                                                                                                               | 187 |
| Conjugate Heat and Mass Transfer at Gas-Phase<br>Ignition of a Cable Line under Current Overload<br><i>M. M. Grigoryeva, G. V. Kuznetsov, and P. A. Strizhak</i>                                                            | 192 |
| Numerical Analysis of Convective Heat Transfer in a Closed<br>Two-Phase Thermosyphon<br><i>G. V. Kuznetsov, M. A. Al-Ani, and M. A. Sheremet</i>                                                                            | 201 |
| Numerical Estimation of the Influence of Natural Convection<br>in Liquid on the Conditions of Ignition by a Local Heat Source<br><i>P. A. Strizhak</i>                                                                      | 211 |
| The Conjugate Problem of Convective-Conductive Heat Transfer<br>for Heat Pipelines<br><i>G. V. Kuznetsov and V. Yu. Polovnikov</i>                                                                                          | 217 |
| Determination of Flow Throttling Conditions in a System Used<br>to Transport Water from Cooling Towers to Turbine Condensers<br><i>S. AlSaqoor, F. Al-Quran, K. AlQdah, A. Andruszkiewicz,<br/>K. Kubas, and J. Gorecki</i> | 225 |
