---

|                                                                                                                          |     |
|--------------------------------------------------------------------------------------------------------------------------|-----|
| Khmaladze Transformation of Integrated Variance Processes with Applications to Goodness-of-Fit Testing                   |     |
| <i>H. Dette and B. Hetzler</i>                                                                                           | 97  |
| Ratio of Generalized Hill's Estimator and Its Asymptotic Normality Theory                                                |     |
| <i>A. Diop and G. S. Lô</i>                                                                                              | 117 |
| One-Dimensional P–P Plots and Precedence Tests for Point Processes on $\mathbb{R}^d$                                     |     |
| <i>A. Jordan and B. G. Ivanoff</i>                                                                                       | 134 |
| Uniform Limit Laws of the Logarithm for Nonparametric Estimators of the Regression Function in Presence of Censored Data |     |
| <i>B. Maillot and V. Viallon</i>                                                                                         | 159 |
| A Stochastic Approximation Algorithm with Multiplicative Step Size Modification                                          |     |
| <i>A. Plakhov and P. Cruz</i>                                                                                            | 185 |
