|                                                                                                                                                                               |     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| History of the Discovery of the Pontryagin Maximum Principle<br><i>R. V. Gamkrelidze</i>                                                                                      | 1   |
| Generalized Needles and Second-Order Conditions in Optimal Control<br><i>E. R. Avakov and G. G. Magaril-Il'yaev</i>                                                           | 8   |
| Spectrum of the Second Variation<br><i>A. A. Agrachev</i>                                                                                                                     | 26  |
| A Sub-Finsler Problem on the Cartan Group<br><i>A. A. Ardentov, E. Le Donne, and Yu. L. Sachkov</i>                                                                           | 42  |
| Kantorovich's Fixed Point Theorem in Metric Spaces and Coincidence Points<br><i>A. V. Arutyunov, E. S. Zhukovskiy, and S. E. Zhukovskiy</i>                                   | 60  |
| Optimal Policies in the Dasgupta–Heal–Solow–Stiglitz Model under Nonconstant Returns to Scale<br><i>Sergey M. Aseev, Konstantin O. Besov, and Serguei Yu. Kaniovski</i>       | 74  |
| Estimate for the Accuracy of a Backward Procedure for the Hamilton–Jacobi Equation<br>in an Infinite-Horizon Optimal Control Problem<br><i>A. L. Bagnò and A. M. Tarasyev</i> | 110 |
| Regularized Extragradient Method of Finding a Solution to an Optimal Control Problem<br>with Inaccurately Specified Input Data<br><i>F. P. Vasil'ev and L. A. Artem'eva</i>   | 124 |
| Hermitian Metric and the Infinite Dihedral Group<br><i>Bryan Goldberg and Rongwei Yang</i>                                                                                    | 136 |
| On Structural Stability of Characteristic Nets and the Cauchy Problem<br>for a Tricomi–Cibrario Type Equation<br><i>A. A. Davydov and Yu. A. Kasten</i>                       | 146 |
| Fractal Theory of Saturn's Ring. II: Electromagnetic Phenomena<br><i>M. I. Zelikin</i>                                                                                        | 153 |
| On a Mathematical Model of Biological Self-Organization<br><i>A. Yu. Kolesov, N. Kh. Rozov, and V. A. Sadovnichii</i>                                                         | 160 |
| Criteria for Convexity of Closed Sets in Banach Spaces<br><i>Yuri S. Ledyev</i>                                                                                               | 190 |
| Stable Functionals of Neutral-Type Dynamical Systems<br><i>N. Yu. Lukoyanov and A. R. Plaksin</i>                                                                             | 205 |

|                                                                                                                                                                               |     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Tracking the Solution of a Nonlinear System with Partly Measured Coordinates<br>of the State Vector<br><i>V. I. Maksimov</i>                                                  | 219 |
| Singular Sets of Extremal Controls in Optimal Control Problems<br><i>M. S. Nikol'skii</i>                                                                                     | 236 |
| Pontryagin's Direct Method for Optimization Problems with Differential Inclusion<br><i>E. S. Polovinkin</i>                                                                   | 241 |
| On Applications of the Hamilton–Jacobi Equations and Optimal Control Theory to Problems<br>of Chemotherapy of Malignant Tumors<br><i>N. N. Subbotina and N. G. Novoselova</i> | 257 |
| An Addition to the Definition of a Stable Bridge and an Approximating System of Sets<br>in Differential Games<br><i>V. N. Ushakov, V. I. Ukhobotov, and A. E. Lipin</i>       | 268 |
| On a Third-Order Singular Arc of Optimal Control in a Minimization Problem<br>for a Mathematical Model of Psoriasis Treatment<br><i>E. N. Khailov and E. V. Grigorieva</i>    | 281 |
| The Programmed Iteration Method in a Game Problem of Realizing Trajectories<br>in a Function Set<br><i>A. G. Chentsov</i>                                                     | 292 |
| In Memory of Evgenii Alekseevich Volkov                                                                                                                                       | 309 |
