|                                                                                                                                                                    |      |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|
| Conditions for the Finiteness of Majorants for Sequences<br>of Operators and Convergence of Fourier Series<br><i>N. Yu. Antonov</i>                                | S1   |
| Turán's Problem for Positive Definite Functions with Supports in a Hexagon<br><i>V. V. Arestov and E. E. Berdysheva</i>                                            | S20  |
| On the Jackson–Stechkin Inequality for the Best $L^2$ -Approximations of Functions by<br>Trigonometric Polynomials<br><i>A. G. Babenko</i>                         | S30  |
| Orders of the Weighted Lebesgue Constants for Fourier Sums with Respect to Orthogonal<br>Polynomials<br><i>V. M. Badkov</i>                                        | S48  |
| The Jackson–Stechkin Inequality with a Nonclassic Modulus of Continuity<br><i>N. A. Baraboshkina</i>                                                               | S65  |
| Wavelets Which are Orthonormal with Respect to an Inner Product in the Sobolev Space<br>$W_2^m$ of Periodic Functions<br><i>N. I. Chernykh and Yu. N. Subbotin</i> | S71  |
| Weak Perturbations of Solutions with Movable Singularities<br><i>L. A. Kalyakin</i>                                                                                | S85  |
| Asymptotics of a Solution of the Kadomtsev–Petviashvili-2 Equation<br><i>O. M. Kiselev</i>                                                                         | S107 |
| The Error of Interpolation of Functions by Polynomials on $n$ -Simplexes<br><i>A. G. Kuptsova</i>                                                                  | S140 |
| A Problem of Extremal Interpolation for Multivariate Functions<br><i>S. I. Novikov and V. T. Shevaldin</i>                                                         | S150 |
| On the Ostrovskii–Peresvolkova Conjecture about Zeros of the Mittag-Leffler Functions<br><i>A. Yu. Popov</i>                                                       | S167 |
| Approximative Properties of Interpolating $\mathcal{L}$ -Splines<br><i>A. A. Sazanov</i>                                                                           | S183 |
| The Jackson–Stechkin Inequality in the Space $C(\mathbb{T})$ with Trigonometric Continuity<br>Modulus Annihilating the First Harmonics<br><i>V. T. Shevaldin</i>   | S206 |
| Trigonometric Series with Monotone Type Coefficients<br><i>S. B. Stechkin</i>                                                                                      | S214 |
| Splines and Relative Widths of Classes of Differentiable Functions<br><i>Yu. N. Subbotin and S. A. Telyakovskii</i>                                                | S225 |
| Introducing an Equivalent Metric in a Linear Space by a Family of its Subsets<br><i>A. I. Vasil'ev</i>                                                             | S235 |
| The Jackson–Stechkin Inequality in $L_2[-\pi, \pi]$<br><i>S. N. Vasil'ev</i>                                                                                       | S243 |
| Errata                                                                                                                                                             | S254 |
