---

|                                                                                                                                            |      |
|--------------------------------------------------------------------------------------------------------------------------------------------|------|
| Approximation of Derivatives of Analytic Functions from One Hardy Class by Another<br>Hardy Class                                          |      |
| <i>R. R. Akopyan</i>                                                                                                                       | S1   |
| Best Uniform Approximation of the Differentiation Operator by Operators Bounded in the<br>Space $L_2$                                      |      |
| <i>V. V. Arestov</i>                                                                                                                       | S9   |
| Linear Interpolation on a Tetrahedron                                                                                                      |      |
| <i>N. V. Baidakova</i>                                                                                                                     | S31  |
| Relaxation of the Pursuit–Evasion Differential Game and Iterative Methods                                                                  |      |
| <i>A. G. Chentsov and D. M. Khachay</i>                                                                                                    | S35  |
| Harmonic Interpolating Wavelets in a Ring                                                                                                  |      |
| <i>N. I. Chernykh and Yu. N. Subbotin</i>                                                                                                  | S58  |
| Best One-Sided Approximation in the Mean of the Characteristic Function of an Interval<br>by Algebraic Polynomials                         |      |
| <i>M. V. Deikalova and A. Yu. Torgashova</i>                                                                                               | S68  |
| Extremal Shift to Accompanying Points in a Positional Differential Game for a<br>Fractional-Order System                                   |      |
| <i>M. I. Gomoyunov</i>                                                                                                                     | S83  |
| Convergence of Trigonometric Fourier Series of Functions with a Constraint on the<br>Fractality of Their Graphs                            |      |
| <i>M. L. Gridnev</i>                                                                                                                       | S106 |
| Integrability Properties of Functions with a Given Behavior of Distribution Functions and<br>Some Applications                             |      |
| <i>A. A. Kovalevsky</i>                                                                                                                    | S112 |
| Bernstein–Szegő Inequality for the Weyl Derivative of Trigonometric Polynomials in $L_0$                                                   |      |
| <i>A. O. Leont'eva</i>                                                                                                                     | S127 |
| Analytic Continuation Methods for Multivalued Functions of One Variable and Their<br>Application to the Solution of Algebraic Equations    |      |
| <i>L. S. Maergoiz</i>                                                                                                                      | S135 |
| Extremal Shift in a Problem of Tracking a Solution of an Operator Differential Equation                                                    |      |
| <i>V. I. Maksimov</i>                                                                                                                      | S152 |
| Calculation of Elements of a Guiding Program Package for Singular Clusters of the Set of<br>Initial States in the Package Guidance Problem |      |
| <i>S. M. Orlov and N. V. Strelkovskii</i>                                                                                                  | S163 |
| Approximation of Functions by $n$ -Separate Wavelets in the Spaces $L^p(\mathbb{R})$ , $1 \leq p \leq \infty$                              |      |
| <i>E. A. Pleshcheva</i>                                                                                                                    | S178 |
| A Feller Transition Kernel with Measure Supports Given by a Set-Valued Mapping                                                             |      |
| <i>S. N. Smirnov</i>                                                                                                                       | S188 |
| Convergence of Quartic Interpolating Splines                                                                                               |      |
| <i>Yu. S. Volkov</i>                                                                                                                       | S196 |
