Mathematical Programming

Multiplier Methods in Bilinear Equilibrium Programming with Application to Nonzero-Sum Games	
<i>A. S. Antipin</i>	S1
Fejér Processes for Infinite Systems of Convex Inequalities	
<i>I. I. Eremin and S. V. Patsko</i>	S32
Two Parametric Families of LP Problems and Their Applications	
<i>A. I. Golikov and Yu. G. Evtushenko</i>	S52
Committee Constructions for Solving Problems of Selection, Diagnostics, and Prediction	
<i>Vl. D. Mazurov, M. Yu. Khachai, and A. I. Rybin</i>	S67
Lexicographic Variational Inequalities and Some Applications	
<i>L. D. Popov</i>	S102
Regularized Lagrange Function and Correction Methods for Improper Convex Programming Problems	
<i>V. D. Skarin</i>	S116

Regularization and Approximation

Solving Equations of the First Kind on Classes of Functions with Singularities	
<i>T. V. Antonova</i>	S145
Error Estimates for Approximation by Polynomials of Degree $4k+3$ on the Triangle	
<i>N. V. Latypova</i>	S190
Control Modeling for Quasilinear Parabolic Equations	
<i>V. I. Maksimov</i>	S214
Regularization and Iterative Approximation for Linear Ill-Posed Problems in the Space of Functions of Bounded Variation	
<i>V. V. Vasin</i>	S225
