Guidelines for Authors of
Molecular Genetics, Microbiology and Virology

1. A manuscript should be signed by all authors and accompanied by a cover letter. It is unacceptable to submit works published or considered for publication elsewhere. The editorial board reserves the right to shorten or edit works accepted for publication. The date of receipt of the final (revised) version of the manuscript is considered the date received.

2. A manuscript should be sent to the editorial board by e-mail.

3. It should be printed in Times New Roman, point size 12, double spaced, with 3-cm margins. All pages should be numbered.

4. Manuscripts of review and discussion articles should not exceed 15 pages (including illustrations, tables, and references). Manuscripts of regular articles should not exceed ten pages.

5. The title page should contain the list of authors, title of the manuscript, author’s affiliations, and addresses, including city, country, and postal code.

6. Information on each author should consist of full name and surname, e-mail address, and postal address for the purpose of contacting the authors of the manuscript.

Example of title page:

N. A. Egorova"a, A. A. Bukshuk"**
and G. N. Krasovskii"a*

Hygienic Problems in Supplying the Population with Hot Water
"Scientific Research Institute of Human Ecology and
Hygiene of the Environment, Moscow, 119121 Russia
"Center for Hygiene and Epidemiology, Moscow oblast, Žvenigorod, 115344 Russia
*e-mail: tussi@list.ru
**e-mail: aabukshuk@mail.ru

7. Manuscripts of original papers should be organized as follows: abstract, keywords, a brief introduction reflecting the state of the art when the paper was written and the goals of current research, materials and methods, results and discussion, conclusions, and references.

The manuscript should be clear and concise, without a long introduction or repetition of text. The manuscript should be accompanied by a glossary of uncommon or specific terms that might confuse the reader. In addition to commonly accepted abbreviations of units of measure and physical, chemical, and mathematical quantities and terms (e.g., DNA), abbreviations of words frequently encountered in the text are permitted. All notation and abbreviations introduced by the author should be explained upon first mention in the text. Abbreviations of simple words are not permitted even if repeated frequently. Doses of pharmaceutical substances, units of measure, and other numerical quantities should be according to the International System of Units (SI).

8. The abstract of the manuscript is the chief source of information in abstracting and indexing systems and should provide the reader with the essence of the work. The reader should be able to determine from the abstract whether he should refer to the full text of the paper in order to obtain detailed information of interest to him. The abstract should explain only the essentials of the work. The structure of the abstract should follow the that of the paper and include aims and tasks, methods, results, and conclusions. However, the subject, theme, and aim of the work are indicated only if they are unclear from the title of the manuscript; it is expedient to describe the methods or techniques used to conduct the work only if they are novel. The text of the abstract is determined by the content of the publication (the amount of information, their scientific value, and/or practical importance), but it should be no less than 100–250 words. The abstract should be accompanied by several keywords or phrases separated by commas.

9. Figures should be prepared as follows. Black-and-white line art should be in TIFF format. Bitmap images should have a resolution of 600 dpi. It is possible to use standard archive tools for compression. Each figure should be on a separate page.
10. Figure captions should be given on a separate page. Captions should indicate labeling of the axes, units of measure, and explanations of curves. Captions of micrographs should indicate the staining method and magnification.

11. Tables. If there is more than one table, they should be numbered. If there is only one table without a heading, Table should be used in place of the heading. Otherwise, the heading should stand alone. Abbreviations are not permitted in tables.

12. References should be according to Uniform Requirements for Manuscripts Submitted to Biomedical Journals. Citation of no more than 30 sources are permitted in regular articles; review articles should not contain more than 60 sources. References should include citations of works published during the last five years. The references should be listed in the order they are cited in the text. Citations in the text are given by numbers in square brackets. References to unpublished works are not permitted. In any type of reference, all authors should be listed unless otherwise unknown.
