1. FORMAT

1.1 General

1.1.1 The Word copy of the translation should be in the following order: rubric, title, author(s), affiliation(s), address(es), date received, abstract, body of text, appendices, acknowledgments, biography, references, tables (with key), figure captions (with key), translator's name.

1.2 Main Heading

1.2.1 The main heading appears in the following order:

   (1) Rubric: if necessary (and available), this appears at the top of the first page in all capital letters.
   (2) The title of the article (see Capitalization for use of capital letters in titles).

   **Note:** If the article was originally submitted by the authors in English and was not edited, a footnote must be made to the title. Use the following format for the footnote:

   The article is published in the original.

   If the original language of the article is English, but this text was edited, use the following format for the footnote:

   The text was submitted by the author(s) in English.

   If the original language of the article is Russian and then the article was translated into English by the author, then use the following format for the footnote:

   The article was translated by the author(s).
(3) The list of authors by initials and surname, with one space between the initials of an author’s name, and one space between the initials and the surname.

(4) The list of affiliations and addresses of the authors (refer to Addresses for the correct way to formulate addresses).

**Note:** If there is more than one affiliation and address, follow the same format as above (authors and then affiliations), but use lowercase letters in italics to indicate the institute with which each author is affiliated, including the first.

M. R. Nemirovskii\(^a\), V. D. Kibal’nik\(^b\), M. S. Khadyev\(^a\), L. R. Dudetskaya\(^a\), and V. A. Tkacheva\(^b\)

\(^a\) Ural State Technical University, Yekaterinburg, 620002 Russia
\(^b\) Physicotechnical Institute, Belarussian Academy of Sciences, ul. Zhodinskaya 4, Minsk, 220730 Belarus

If an author has more than one affiliation, use the following format:

Yu. M. Golubev\(^a\) and M. I. Kolbov\(^ab\)

\(^a\) Institute of Physics (Petrodvorets Branch), St. Petersburg State University, ul. Pervogo maya 100, Petrodvorets, 198904 Russia
\(^b\) Institute of Physics, Essen, D-45117 Germany

### 1.3 Abstract

#### 1.3.1 The main heading is followed by the abstract. The word *abstract* should be capitalized. The following is the correct format for abstracts:

**First Stage**

@Abstract@---The electroluminescent and photoluminescent properties of polymeric films based on poly(hydroxyaminoethers) were studied.

**Second Stage**

Abstract—The electroluminescent and photoluminescent properties of polymeric films based on poly(hydroxyaminoethers) were studied.

**Note:** The present and present perfect tenses in passive voice are generally preferred in abstracts. The abstract should be printed as a single paragraph.

The behavior of the flare plasma parameters is considered.

It has been indicated that the intensity of auroral disturbances decreases with increasing electric fields.

### 1.4 Date Received

#### 1.4.1 The date the article was received (Received + month, day, and year) should be placed on a separate line between the address and the beginning of the abstract. If more than one date is provided, use the format illustrated below.

Received July 17, 2001; in final form, August 19, 2001

**Note:** A few journals use a different format. Refer to the appropriate journal appendix.
1.5 Headings and Subheadings

1.5.1 Headings of sections within the text should be written in all capitals. First-level subheadings should be marked at the beginning and end with @ (at first stage) to indicate italicization and should follow title capitalization. Second-level subheadings (i.e., headings run into a paragraph) should follow sentence capitalization, with the first word and proper nouns capitalized, and should be marked with @ to indicate italicization. Second-level subheadings may also be set in bold if so specified in the journal appendix or by the chief translator; however, note that the form chosen for a particular type of second-level subheading should be used consistently throughout the paper.

INTRODUCTION  [section heading]
FORMULATION OF THE PROBLEM
   Early Research  [first-level subheading]
   The Latest Findings
EXPERIMENTAL
   Synthesis
   Calorimetric Measurements
      Heat capacities  [second-level subheading]

   Key

1.6 Acknowledgments

Note: This is a standard subsection title and must appear as ACKNOWLEDGMENTS regardless of the number of people or institutions being acknowledged.

1.6.1 Acknowledgments should be brief and use common English constructions. Rather than a phrase such as The authors would like to take this opportunity to express their sincere gratitude to ..., use a phrase such as We would like to thank ....

   We thank A.A. Starobinskii and M.Yu. Khlopov for their participation in discussions of the results.

   We are grateful to A.S. Sharov and the reviewers for careful reading of the manuscript and helpful remarks.

Note that grateful, not thankful, should be used in acknowledgments.

1.6.2 Much research is funded by the Российский Фонд Фундаментальных Исследований. This should be acknowledged as in the following examples (and never simply RFBR):

   This work was supported by the Russian Foundation for Basic Research, project no. 94-02-04253a.

   This study was supported in part by the Russian Foundation for Basic Research, project no. 94-02-04253a.
Acknowledgment by an author or authors of support received by themselves, and not the project as a whole, is formatted as follows:

M.V. Sazhin acknowledges the support of the Russian Foundation for Basic Research (project no. 94-02-04253a), the International Science Foundation (grant no. NDH 000), and the Cosmion Scientific Research Center.

An initial may be used in place of the surname (i.e., in the above example, “M.V.S. acknowledges ....”).

1.7 Biographies

1.7.1 If a biography of the author is included with an article, it should be formulated as follows:

1.8 Footnotes

1.8.1 Footnotes should be indicated after the item(s) to which they refer. Whenever possible, avoid placing footnote markers in the middle of sentences. The item should be followed by the footnote number and (at first stage) the text of the footnote in parentheses, with the word Footnote. Mark the spot with @ to indicate superscripting and place another @ to indicate the end of the footnote. Do not place the text of the footnote at the end of the paper.

We cannot provide an analysis in this paper because of space limitations.@4 (Footnote 4: Our forthcoming paper will clarify these points.)@

1.9 Appendices

1.9.1 An appendix or appendices appear between the end of the main text and the beginning of the ACKNOWLEDGMENTS section, or at the beginning of the REFERENCES section if there are no ACKNOWLEDGMENTS.

1.9.2 If there is more than one appendix, they should be designated with consecutive letters (APPENDIX A, APPENDIX B, APPENDIX C, etc.).

1.9.3 Equations appearing in an appendix should be numbered sequentially, preceded by the letter of the given appendix, for example, (A.1), (A.2); (B.1), (B.2); etc.

NOTE: If there is only one appendix, numbering of equations should be preceded by the letter “A”; however, the section heading will appear as “APPENDIX” with no letter designation.

1.10 Format Specifications and Changes to Text

1.10.1 (For translators only) All changes that the translator considers necessary to introduce into the translated material must be approved by the author. The only practical way to make such changes is
Changes are highlighted in yellow.

to contact the author and ask to make changes at the Translation stage. When a paper with such a change is submitted, this change should be indicated in the body of the e-mail to the respective Translation Dept. manager, which will be forwarded to the Technological Dept.

1.10.2 Do not type-set formulas or nonstandard type styles. Instead, use @ to indicate (1) all super- or subscripts; (2) all mathematical or chemical symbols that are inaccessible by a single keyboard stroke; and (3) all formatting, such as bold or italic type. In each case, close @ up to the item it designates. Formatting should be marked at both its beginning and its end. Complicated or unusual formatting may require specifications, which should be placed in square brackets (e.g., [ital], [bold], [alpha]) after the item requiring special formatting.

1.10.3 If the order of the formulas remains the same as in the Russian text, a single @ before the first letter of the formula is sufficient. If the order is changed or if there is a chance that the scientific editor or the layout editor will not be certain which formula goes in which spot, add the minimum quantity of symbols that will permit identification of the formula. Thus,

В изовекторном канале мнимые части нуклонных формфакторов при $t > t_0 = (2\mu)^2$ выражаются через пионный формфактор и $p$-волновую амплитуду ПП $\to NN$ рассеяния с помощью аналитического продолжения соотношений унитарности под порог $NN$. should appear in the Word text as

By means of analytic continuation of the unitarity relations to the region below the @N@N threshold, it can be shown that, in the isovector channel, the imaginary parts of nucleon form factors at $t > t_0 = @$ are expressed in terms of the pion form factor and the $@p$-wave amplitude of $@[\Pi][\Pi]@ @N@N$ scattering.

1.10.4 If there is no punctuation separating the parts of a formula, do not use more than one @, even if the formula is long:

This value is determined as the polynomial of $P$: $x(m – k, n - 1) = \Sigma_{(i,j)\neq\Omega} a_{i,j} (m,n) e^j$. becomes

This value is determined as the polynomial of $@P$: $@x = @$.

1.10.5 Do not type numbered equations (placed on separate lines). In most cases, it is sufficient to replace the equation with a single @, retaining any required terminating punctuation and the equation number in parentheses, i.e.,

@. (1)

If the equation contains sub- or superscripts or other material that must be translated, make a key (see 1.10.7).

1.10.6 Below are some examples of symbols and formulas and some possible ways of writing them in the Word text:

<table>
<thead>
<tr>
<th>Symbol or Formula</th>
<th>Possibilities</th>
</tr>
</thead>
<tbody>
<tr>
<td>$A_i$</td>
<td>@A@i</td>
</tr>
<tr>
<td>$H_2O$</td>
<td>H@2O</td>
</tr>
</tbody>
</table>
Changes are highlighted in yellow.

8 \times 10^{-15} \quad 8 \text{@} 10\text{--}15

15 \times 20 \text{ cm} \quad 15 \text{@} 20 \text{ cm}

F^{1-x} \quad @F[1 -- @x]

\mu_B \quad @[mu]@B

Cu \ K\alpha \quad Cu \ @K@[alpha]

**Note:** Multiplication signs should be designated @ or @x (*not* x). Be sure that the proper spacing is maintained.

1.10.7 If indices appearing in text must be italicized, indicate this in brackets after the index or formula only when the layout editor may be confused (i.e., when it is unclear whether the index is part of a word or a symbol). Thus,

\[ E_i \] should be written in the Word text as \[ @E@i[ital] \]

For formulas that are not included in a line of text (выносные/рамочные формулы), a key should be provided immediately after the formula, i.e.,

\[ @ (1) \]

Key: x, i [ital]

If many indices in a special type style are present, a key to them may be provided at the end of the Word text instead, to avoid repetition of format specifications after each index in the text. The key should be in list form:

Key to indices:
italicized: i, x
etc.

However, if the possibility of confusion exists (i.e., identical indices are present, one italic and one roman), the type style should be indicated after each index.

1.10.8 If there are many formulas or symbols in a sentence, be sure that each is easily identifiable. If the formula is accompanied by an equation number, this should be enough to identify it. If two or more symbols or formulas are separated by punctuation (comma, colon, semicolon, period, etc.), be sure to identify each part separately. Thus,

\[ \text{… if } k \text{ changes by } \Delta k \text{ to become } \]

\[ k_1 = k + \Delta k, \quad (24) \]

then the velocity parameter \( \beta \) also changes to become

\[ \beta_1 = \beta + \Delta \beta, \quad (25) \]

where

\[ \beta_1 = k_1 a, \Delta \beta = a \Delta k. \quad (26) \]

should appear as

\[ \text{… if } @k \text{ changes by } @[delta]@k \text{ to become } @, (24) \]

then the velocity parameter @[beta] also changes to become

@, (25)
where

\[ I_s = \sum_n E_{n_k} \Omega_{n_k} f_F(E_{n_k}) V, \quad (1) \]

and

In this case, the current through the sample is

\[ I_s = \sum_n E_{n_k} \Omega_{n_k} f_F(E_{n_k}) V, \quad (1) \]

where \( E_{n_k} \) is the dispersion law for electrons; \( \Omega_{n_k} \) is the unit vector along the direction \( \Delta_k E_{n_k} \); \( f_F(E_{n_k}) \) is the equilibrium Fermi–Dirac occupation function, which is equal to zero at \( E > E_F + e\phi \); and \( V \) is the crystal volume.

Note: The above are only possible variations of what might be written so that everything is clear. Again, it is the responsibility of the translator to make all formulas clear to the layout editor.

(For translators) Such explanatory words in brackets as [ital], [bold], [alpha], etc., should be used only in extraordinary cases when understanding can be misleading; e.g., \( \kappa \) can sometimes be misunderstood as \( \text{key} \). Otherwise texts may result in saturation with these explanatory words, which are not printed in final versions but are erroneously taken into account in signature volume.

Never replace single letters or numerals in the text by a sole \( @ \). Always use at least one letter in the case of symbols and the whole numeral even if \( @ \) goes with it.

Note that such symbols as \( * \), \( \sim \), and Roman numerals can be type-set from the keyboard and are not "special" symbols.

For formulas (both numbered and unnumbered), use Key in Word copies immediately after the formulas according to Russian symbols or letters numbered by translators in the Russian originals; for instance,

Key: (1) avg, (2) rad, (3) p [instead of the Russian denotations and symbols (1) \( \text{ср} \), (2) \( \text{рад} \), (3) \( \text{п} \)]

In formatting a symbol at first stage for which there are possible uppercase and lowercase versions, to avoid confusion, the proper version should be expressed in square brackets.

For example: “\( \Pi \)” should be formatted as "@[Pi]"; “\( \pi \)” should be formatted as “@[pi].”

1.11 Tables

1.11.1 Simple tables should be translated and numbered according to the following system. In the Russian text, number each word or phrase to be translated, beginning in the upper left and proceeding across and down. Use the same number for a word appearing more than once in the table. Then, translate each numbered item in order. Use this simple system whenever possible. The table
Table 1. Clinical and immunological features of lupus nephritis variants

<table>
<thead>
<tr>
<th>Sign</th>
<th>Patients</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>with nephrotic syndrome (n = 21)</td>
</tr>
<tr>
<td></td>
<td>without nephrotic syndrome (n = 29)</td>
</tr>
<tr>
<td></td>
<td>abs.</td>
</tr>
<tr>
<td>Fever</td>
<td>10</td>
</tr>
<tr>
<td>Butterfly rash</td>
<td>10</td>
</tr>
<tr>
<td>Weight loss, alopecia, asthenia</td>
<td>14</td>
</tr>
<tr>
<td>Raynaud’s syndrome</td>
<td>1</td>
</tr>
<tr>
<td>Sjogren’s syndrome</td>
<td>0</td>
</tr>
</tbody>
</table>

would be written as follows:

Table 1. Clinical and immunological feature of lupus nephritis variants

1.1.2 In some circumstances, it may be preferable to use the following system. Note that this system is considerably more complex and should not be used without justification. Number the columns of the table in order of appearance. Subdivisions within each column should be indicated by .1, .2, .3, etc. Rows should also be numbered. The placement of each item in each row should be designated by the number of the row, a decimal point, and the number of the column. For example: the item in the sixth row, third column, and first subdivision would be designated as 6.3.1. The translator need only list translated words.

For example, the table

Таблица 1. Клинические и иммунологические симптомы вариантов lupus nephritis

<table>
<thead>
<tr>
<th>Симптом (1)</th>
<th>Больные (2)</th>
<th>С с почечным синдромом (n = 21)</th>
<th>Без почечного синдрома (n = 29)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td>число (2.1.1)</td>
<td>% (2.1.2)</td>
</tr>
<tr>
<td>Лихорадка</td>
<td>(1.1)</td>
<td>10</td>
<td>50</td>
</tr>
<tr>
<td>Сыпь</td>
<td>(2.1)</td>
<td>10</td>
<td>50</td>
</tr>
<tr>
<td>Похудание, облысение, астения</td>
<td>(3.1)</td>
<td>14</td>
<td>70</td>
</tr>
<tr>
<td>Синдром Рейно</td>
<td>(4.1)</td>
<td>1</td>
<td>5</td>
</tr>
<tr>
<td>Синдром Шёгрена</td>
<td>(5.1)</td>
<td>0</td>
<td>0</td>
</tr>
</tbody>
</table>
Changes are highlighted in yellow.

would be written as follows:

Table 1. Clinical and immunological features of lupus nephritis variants
Key: Columns: 1. Sign; 2. Patients; 2.1. with nephrotic syndrome (@n = 21); 2.2. without nephrotic syndrome (@n = 29); 2.1.1. abs.; 2.1.2. %; 2.2.1. abs.; 2.2.2. %

1.11.3 For both systems of table translation, note that translated words or phrases MUST be numbered in the Russian original. Do not simply translate them and number them in the translation without numbering them in the original.

1.11.4 If the table has notes, they should be formatted in the proofs as follows. Source notes, if any, should be given first, preceded by "Source(s):"; general notes (i.e., notes that apply to the whole table) should be given next. Specific notes should follow general notes and should be formatted in one of three ways:

(1) Superscripted letters are used for notes to a specific part of a table (e.g., items or headings within the table).

(2) Superscripted numbers may be used for a table composed only of words.

(3) Symbols may be used in certain cases (i.e., a table containing formulas, in which case use of superscripted numbers or letters could lead to confusion).

Notes on probability, if any, are given after any other specific notes. Specific notes and notes on probability that follow a general note should be placed flush left. Thus, the four types of notes following a table would appear as follows:

Data were collected in only seven Siberian sites.
aData are incomplete for this site.
bData for 1993 not included.
*p < .05.
**p < .01.
***p < .001.

1.11.5 If there is only one table in an article, it should not be numbered, and in this case the word table should not be capitalized in text. If such a table is referred to parenthetically in text, write (see table) or (table). If the table does not have a heading, table (capitalized and in bold roman type) should be used in place of the heading. Otherwise, the heading should be used without table.

1.12 Figures

1.12.1 Words or phrases within figures must be numbered in the Russian manuscript, translated, and organized in a numbered key, as follows. The key for the figure should appear in the Word manuscript after the translated figure caption. Numbered points with the Key for both tables and figures should be written in a unified manner. The best way is to put numbers in parentheses, for instance,

Key: (1) Thickness of vein; (2) Time; (3)....

Letters indicating panels of a figure or items within a figure do not need to be included in the key.
1.12.2 Letters and numbers used in captions to designate panels of figures or items within figures should be placed in the position that provides greatest caption clarity and least interrupts the flow of the caption. This usually means that letters and numbers should be placed before the items they indicate, although occasionally they may be placed after the items [e.g., \( @T = (@1) 100, (@2) 200, \) or \( (@3) 300 \text{ K} \)]. Note how the caption to the following figure is written:

![Figure 1](image)

Note italicization of numbers and lowercase letters designating items within the figure (marked with \( @ \) at first stage), e.g., spectra, curves, etc. (see 3.17.11). Letters designating panels are not italicized.

1.12.3 If there is only one figure in an article, it should not be numbered, and in this case the word *figure* should not be capitalized in text. If such a figure is referred to parenthetically in text, write (see *figure*) or (*figure*). If the figure does not have a caption, *figure* (capitalized and in bold roman type) should be used in place of the caption. Otherwise, the caption should be used without *figure*.

**Note:** If an article has only one figure, but the figure is divided into parts, it should be designated *Figure 1*. For example, write *Fig. 1a*, not, e.g., *figure, a*.

1.13 Оформление ключей при работе без бумажных копий оригиналов статей

Настоящий раздел описывает правила оформления ключей в тех случаях, когда нет бумажных копий исходных статей. Использование этих правил более предпочтительно, чем тех, которые описаны в разделах 1.10-1.12. Каждый переводчик должен проконсультироваться у менеджера относительно использования тех или иных правил.

1.13.1. Ключи для перевода текстов в рисунках (обозначений и надписей на рисунках), таблицах, выносных формулах, символах и символьных обозначениях, сокращениях, верхних и нижних индексах должны оформляться следующим образом:

A. Список ключей должен быть приведен в файле перевода.
B. Элементы выносных формул, подлежащие переводу, и сам перевод должны приводиться сразу после соответствующих формул.
1.13.2. Ключи к формулам

Ключи к выносным нумерованным и ненумерованным формулам, верхним и нижним индексам, а также к любой текстовой информации в формулах, которые нуждаются в переводе на английский, оформляются в самом тексте перевода. На следующей после формулы строчке ставится слово Key, далее печатается подлежащий переводу фрагмент знак --> и перевод этого фрагмента.

Пример:

\[ @, (2) \]
Key: транс --> trans.

\[ @, (3) \]
Key: набл --> eff.

Примечание: Ключи к формулам в тексте не нужны, перевод должен быть дан непосредственно в тексте, например

Наблюдаемая константа скорости реакции \( k_{\text{набл}} \) вычисляется по формуле (9)

Должно быть оформлено как

The apparent rate constant \( @k@\text{app} \) is calculated by formula (9)

1.13.3. Ключи к таблицам и рисункам оформляются по следующему образцу:

**TABLES** [название раздела - после раздела REFERENCES]
Table 1. Calculation of dual networks upon a change in structure
Key:
Russian --> English;
Russian --> English;
Russian --> English.

Table 2. Values of coefficient b
Key:
Russian --> English;
Russian --> English;
Russian --> English.

**FIGURE CAPTIONS** [название раздела - после раздела TABLES или сразу после REFERENCES если нет таблиц]
Fig. 1. Example of branch orientation in dual network of six branches.
Key:
Russian --> English;
Russian --> English;
Russian --> English.
Fig. 2. Diagram of variations in power in dual network upon a change in structure.

Key:
Russian --> English;
Russian --> English;
Russian --> English.

и т.д.

Ключи располагаются построчно, не нумеруются, строки с ключами отделяются точкой с запятой, после последнего ключа ставится точка.

Обратите внимание на то, что после перевода подрисуночной надписи ставится точка, а после названия таблицы точка не ставится.

1.13.4. При оформлении ключей не обязательно перенабирать весь русский текст полностью. Необходимо набрать такое количество слов, которое будет достаточным, чтобы было понятно, что именно подлежит замене при переводе. Английский текст необходимо набрать полностью.

1.14 Translator's name

Необходимо указывать инициалы и фамилию переводчика в самом конце текста перевода статьи, после References и Figure Captions в виде "Translated by …" и выделять знаками @@@ на стадии Translating и курсивом – в верстке.

В конечном варианте верстки эта часть статьи должна выглядеть следующим образом:
CONCLUSIONS

In our experiments, we revealed characteristic features of the behavior fibers after their UV irradiation. We showed that the examined samples have a high degree of crystallinity. It was found that, after UV irradiation, the IR spectra of the polypropylene fiber show bands related to vibrations of carbonyl, hydroxyl, and hydroperoxide groups. This indicates that the sample surface experiences weak photooxidation under the action of UV radiation at a wavelength of 222 nm. Due to the adsorption, the concentration of naphthalene in water with polypropylene microfibers decreased approximately 20-fold and that of phenol decreased 4-fold. Our results show that, as a result of photolysis, phenol and naphthalene, as well as their transformation products, are efficiently adsorbed from the water on the surface polypropylene microfibers.

ACKNOWLEDGMENTS

This work was financially supported by the FI3P project “Scientific and Pedagogical Personnel of Innovative Russia (2009–2013)” in terms of carrying out arrangement 1.2.1 (state contract no. P 1128) and by a grant from the President of the Russian Federation in Support of Leading Scientific Schools (no. NSh-512.2012.2.). Experiments were performed at the Quantum Chemistry, Spectroscopy, and Photonics of Nanomaterials collective research center at Tomsk State University.

Translated by V. Rogovoi

2. SPELLING

2.1 General

2.1.1 Use American spelling.

<table>
<thead>
<tr>
<th>English</th>
<th>Russian</th>
</tr>
</thead>
<tbody>
<tr>
<td>analyze</td>
<td>analyse</td>
</tr>
<tr>
<td>color</td>
<td>colour</td>
</tr>
<tr>
<td>meter</td>
<td>metre</td>
</tr>
<tr>
<td>program</td>
<td>programme</td>
</tr>
<tr>
<td>sulfur</td>
<td>sulphur</td>
</tr>
</tbody>
</table>

Note: Use the original spelling for proper names (e.g., International Centre for Theoretical Physics).

2.1.2 For standard American spelling, consult Webster’s Ninth New Collegiate Dictionary or Merriam-Webster’s Collegiate Dictionary, tenth edition (or http://www.m-w.com/); the large Webster’s International, although it has more words, sometimes has spellings that differ from usual American English (especially with regard to hyphenation). Some words have more than one acceptable spelling; generally, use the first spelling found in Webster’s. Note the following exceptions:
Changes are highlighted in yellow.

equilibria  not  equilibriums
indices  not  indexes [when the word is used in a mathematical sense]
gage  not  gauge [when the word describes a measuring instrument]

2.1.3 Use of indefinite articles, including with abbreviations or acronyms, follows phonetic rules, except in cases of abbreviations of chemical elements, where the indefinite article is chosen according to the full spelling of the first word.

an ECG  an NMR spectrum  a UFO  an APB
exception:  a He–Ne laser (a helium–neon laser)

2.1.4 For English words, follow the standard principles for word division. Word division of transliterated Russian words should follow the rules of word division of Russian words. Note: This is only an issue regarding hyphenation when reading second stage proofs.

2.2 Transliteration

2.2.1 Use the Interperiodica transliteration system for our regular journals. There should be no deviations from this system but for the exceptions listed below and in journal appendixes, and preferences of individual authors regarding the spelling of their names.

а  а  ж  zh  н  н  ф  f  ы  y
б  b  з  z  о  o  х  kh  ъ  ”
в  в  и  i  п  p  ц  ts  э  e
г  g  й  i  р  r  ч  ch  ю  yu
д  d  к  k  с  s  ш  sh  я  ya
е  е  л  l  т  t  щ  shch
ё  е  м  m  у  u  ъ  ’

There are no exceptions for journals formerly published by the American Institute of Physics.

Here are some names that are commonly transliterated incorrectly in our regular journals:

Kondrat’ev  not  Kondratev or Kondratyev
Petr  not  Pyotr or Peter
Yurii  not  Yuri
Aleksandr  not  Alexander
Mendeleev  not  Mendeleyev

2.2.2 When citing initials, use the entire transliteration of the Russian letter, not just the first letter of the transliteration.

Yu.K. Petrov  Ya.P. Ivanov  Zh. Ignatov

Note: Initials should be used only at the first mention of a person’s name. All subsequent references should use only the person’s last name, unless the article mentions two people with the same last name and confusion may result from use of the last name alone. This mistake is commonly found in chronicles, death announcements, symposia announcements, etc.

2.2.3 Use the following transliteration system for Ukrainian.
2.3 Transliteration Exceptions

2.3.1 The following are the only exceptions to the Interperiodica transliteration system both for regular and for ex-AIP journals:

(1) Spellings of well-known Russian personal names that are generally accepted in English-speaking countries. Use the “Dictionary of Biographical Names” in Webster’s as a guideline and the list of names in the appendix for each journal (useful for Russian scientists widely published in the West).

(2) Spellings of well-known geographical place names in the former Soviet Union that are generally accepted in English-speaking countries. Most of the following examples are taken from the “Dictionary of Geographical Names” in Webster’s.

Azerbaijan not Azerbaidzhan
Belarus not Belarus’
Chisinau not Kishinev
Karelia not Kareliya
Kazan not Kazan’
Lviv or Lvov not L’viv or L’vov
Mariupol not Mariupol’
Moscow not Moskva
Nizhni Novgorod not Nizhnii Novgorod
Peterhof not Petergof (since 1944, Petrodvorets)

Rostov-on-Don not Rostov-na-Donu
Sevastopol not Sevastopol’
St. Petersburg not Sankt-Peterburg
Tajikistan not Tadzhikistan
Tolyatti not Tol’yatti
Tver not Tver’
Yaroslavl not Yaroslavl’
Yegor’evsk not Egor’evsk
Ekaterinburg not Yekaterinburg

(3) Drop the -skaya ending on oblast names and the -skii ending on krai names that are derived from a present or former city name.

Moscow oblast not Moscow oblast
Krasnodar krai not Krasnodar krai
Nizhni Novgorod oblast not Nizhni Novgorod oblast

Exception: Primorskii krai

(4) The foreign-published variants of scientists’ names that those working on the journal know to be the scientists’ preferred form (listed in the appendix for each journal; consult the scientific editor when in doubt), as well as names of non-Russians, e.g., Germans, Hungarians, etc. (e.g., Schwartz, not Shvarts). However, note that, in references citing the work of a Russian scientist
in a non-Russian publication or a foreign scientist in a Russian publication, the scientist’s name must be spelled as it appears in the publication, even if the person’s name appears in other forms elsewhere in the article.

(5) Titles of journals, books, etc., already published in English.

(6) The word ruble and other Russian words that have become commonly known in English (such as glasnost, Chernobyl, oblast);

(7) Effects, laws, reactions, theorems, etc., that are named after scholars (whose names should appear as they have come to be accepted; use the Dictionary of Named Effects and Laws as a guide).

2.3.2 The following list includes some of the more confusing spellings of place names. When in doubt, transliterate according to the system above.

<table>

</table>

**Note:** For the correct spelling of geographical names of places outside the former Soviet Union, look in the *English–Russian/Russian–English Geographical Dictionary* or the “Dictionary of Geographical Names” in *Webster’s Collegiate Dictionary*.

3. PUNCTUATION AND TYPE STYLES

3.1 General

3.1.1 See Chapter 10 for punctuation used in references.
3.1.2. In the second stage proofs, be sure that “smart” quotation marks are used.

“blue” copper protein (not "blue")  Newton’s law (not Newton's)

It is strongly recommended that while working at first stage, smart quotes in the word processing program be turned off. If you do not know the procedure, please consult the Help function or contact the Language Editing Dept. for instruction on how to disable this function.

3.2 Apostrophe

3.2.1 The use of an ‘s with words ending in [s] or [z] sounds usually depends on whether a pronounceable final syllable is formed: if the syllable is formed, the ‘s is used; if no final pronounceable syllable is formed, the apostrophe is retained but the s is not added.

Knox’s products  Aristophanes’ play  for righteousness’ sake

3.2.2 Form the possessive of a joint owner by adding an apostrophe and an s after the final name only.

Kanter and Marshall’s results  Smith and Green’s theory

3.2.3 For use of apostrophes with numerals, see Numeral Usage (Chapter 6).

3.2.4 Unless confusion would result, plurals of abbreviations and acronyms, capital letters used as words, hyphenated coinages used as nouns, and numbers are formed by adding s without an apostrophe.

ECGs  the three Rs  ABCs  ne’er-do-wells  sixes and sevens  the 1950s

However, abbreviations with periods, lowercase letters used as words, and capital letters that would be confusing if s were added alone form the plural with ‘s.

PhD’s  p’s and q’s  x’s and y’s  SOS’s

3.3 Period

3.3.1 Do not use periods after most abbreviations and symbols, except when the abbreviation could be confused with another word (in. for inches, no. for number, etc.). For examples and exceptions, see Abbreviations (Chapter 5).

3.3.2 Do not use periods in commonly used academic degrees or in abbreviated country names used as adjectives.

US  USA  UK  PhD  MS

**Note 1:** Write also Washington, DC, not Washington, D.C.
**Note 2:** An exception is the correct abbreviation of the journal Proceedings of the National Academy of Sciences of the United States of America: *Proc. Natl. Acad. Sci. U. S. A.*

3.3.3 Do not use periods after the title, authors, and addresses in the main heading of an article, or after headings and table titles. Do use a period after figure captions and footnotes to tables.
3.4 Comma

3.4.1 Never separate a verb from its subject or its object with a single comma.

Incorrect
The addition of substituted silanes to carbon–carbon double bonds, has been studied extensively.
Correct
The addition of substituted silanes to carbon–carbon double bonds has been studied extensively.

3.4.2 Generally use a comma before the coordinating conjunctions and, or, nor, but, yet, for, and so when they connect two main clauses (separate subjects and predicates). The comma may be omitted if the clauses are short and closely related. If the clauses themselves contain commas, other internal punctuation, or are very long, they should be separated by a semicolon.

Toluene and hexane were purified by standard procedures, and benzene was redistilled from calcium hydride.
No dielectric constants are available for concentrated acids, so it is difficult to give a quantitative explanation for the results.
[but]
The experiment was successful and the results were analyzed.

Notes: (1) In a compound sentence composed of a series of short independent clauses the last two of which are joined by a conjunction, the clauses should be separated by commas. If the clauses themselves contain commas, semicolons should be used to separate all of them.

Harris presented the proposal to the governor, the governor discussed it with the senator, and the senator made an appointment with the president.

Harris presented the proposal, along with a feasibility study, to the governor; the governor discussed it with the senator, who regarded it favorably; and the senator made an appointment with the president.

(2) The comma should be omitted before a conjunction connecting two independent clauses if an introductory prepositional phrase or dependent clause “controls” both main clauses.

For reactions of the order \( n \), \( a = b \) and \( c = d \).

No comma is needed before and because, although the equations function as main clauses, they are both “controlled” by the prepositional phrase; to put a comma after \( a = b \) upsets the logical balance in the sentence; i.e., theoretically, \( c = d \) could be seen as an entirely separate statement: (For reactions of the order \( n \), \( (a = b) \) and \( (c = d) \)).

(3) No comma is required between two dependent clauses connected by a coordinate conjunction. A comma may be used for clarity.

We know that the pressure rises and the temperature increases when the pot is covered.
In this case, \( Q_c = v + 2x \), where \( v = y \) and \( Q_c \) is the last term.

3.4.3 Use comma(s) to set off an adverbial clause (or long phrase) that precedes or interrupts the main clause.
Because of the known reactivity of x-chloro sulfides, it is not surprising that compound 10 is easily converted to the x-hydroxy sulfide by water.

After an hour of exposure to light, the cells died.

Note: Often a sentence can be improved by moving an interrupting adverbial clause to the beginning of the sentence.

Poor
The report, after being read aloud, was put up for consideration.

Better
After being read aloud, the report was put up for consideration.

3.4.4 (1) Use a comma to set off an introductory phrase or dependent clause before the main clause if it is long or confusing. A good rule of thumb is to use a comma if the introductory phrase consists of four or more words.

In 1977 the maximum allowable concentration of NO\textsubscript{x} was revised … [no comma needed]

In our case the confidence function is piecewise linear … [no comma needed]

Before we can make a decision, we must have all the facts. [long introductory clause; comma needed]

Note: Omit the comma after an introductory phrase or dependent clause if the word order in the rest of the sentence is inverted.

Only after we have analyzed the data can we make a recommendation.

In precisely this case were the results satisfactory.

Note: Always use a comma to set off a transitional adverb or expression (however, therefore, consequently, on the contrary, on the other hand, etc.—see also 3.4.9) that begins a sentence.

(2) Use two commas to set off an introductory phrase at the beginning of a dependent clause or omit the commas altogether. If the phrase is long or breaks the flow of the sentence, then commas should be used.

Our experiments showed that, at low temperature, all of the compounds became brittle. (or)

Our experiments showed that at low temperature all of the compounds became brittle.

Such a structure of the melt bath should be considered because of the metallic layer, which, due to its high thermal conductivity, redistributes the heat flux.

(3) An introductory word, phrase, or clause following a coordinate conjunction in a compound sentence may be punctuated as illustrated in the following sentence.

The curves in Fig. 2 are derived from a coarser approximation of the method than those in Fig. 1, but, other than the top curve, they have a reasonable shape. (or)

… in Fig. 1, but other than the top curve, they have a reasonable shape. (or)

… in Fig. 1, but other than the top curve they have a reasonable shape.

(4) Use two commas to set off a word, phrase, or clause that interrupts the clause.

The report, after being read aloud, was put up for consideration.
The analysis, as far as I know, contained no errors.

(5) Phrases beginning with the prepositions as well as, together with, along with, in addition to, and accompanied by should be separated by commas when they fall between the subject and verb. Such phrases are not part of the grammatical subject.

The governor, as well as his press secretary, was shot.

(6) When two or more complementary or antithetical phrases refer to a single word following, the phrases should be separated from one another and from the following word by commas.

A similar, but even more striking, difference in the gas exchange level was observed in experiments with grass carp.

The most provocative, if not the most important, part of the statement came last.

We had hoped that the mayor himself, not his assistant, would be present.

3.4.5 Use commas both before and after nonrestrictive clauses and phrases. Do not use commas before or after restrictive clauses or phrases when they fall within the main clause or follow the main clause. A restrictive clause or phrase is necessary to complete the meaning of the sentence. A nonrestrictive clause or phrase provides additional descriptive or explanatory detail, but could be omitted without changing the meaning of the sentence.

The products that were produced at high temperatures were unstable. [restrictive: This sentence implies that specifically only those products produced at high temperatures were unstable; there may have been others that were stable. This is specific information that is part of the subject and therefore must be “restricted” to the subject, that is, not separated from it by a comma.]

The products, which were produced at high temperatures, were unstable. [nonrestrictive: This sentence gives additional information about the products referred to here, that they were produced at high temperatures.]

The report that the committee submitted was well documented. [restrictive]

The June financial report, which was well documented, was discussed in great detail. [nonrestrictive]

Mr. Jones, sitting comfortably before the fire, slowly and ceremoniously opened his mail. [nonrestrictive]

The elderly woman sitting beside Mr. Jones was his nurse. [restrictive]

Tom was astonished when he heard the terms. [restrictive]

Tom will meet Mike at 7 p.m., when the train arrives. [nonrestrictive]

I plan to visit the town where I used to live. [restrictive]

I plan to stop off in St. Louis, where I used to live. [nonrestrictive]

The figures for last year cover urban areas only, whereas those for this year include rural areas as well. [nonr.]

The union has decided not to strike while negotiations are still going on. [restrictive]

In 1998–1999, we observed a significant reduction of the river area occupied by young salmon. [restrictive: This refers to specific area of the river occupied by young salmon]

In 1998–1999, we observed a significant reduction of the river area, occupied by young salmon. [nonrestrictive: Additional information about the river is given, that it was occupied by young salmon.]
3.4.6  Use a comma before, but not after, the subordinating conjunction (as, while, since, although, because, whereas) in a nonrestrictive clause. Do not use a comma after a subordinating or coordinating conjunction unless an interrupting element appears.

Incorrect
The bryopyran ring system is a unique requirement for anticancer activity, whereas, the ester substituents
influence the degree of cytotoxicity.
Correct
The bryopyran ring system is a unique requirement for anticancer activity, whereas the ester substituents
influence the degree of cytotoxicity.

3.4.7  Do not use a comma before and, or, or nor as part of a compound predicate unless one is needed for clarity.

Incorrect: The reversal of the central-field polarity could also take place on Mercury, and lead to the formation of variously oriented local fields.
Correct: The reversal of the central-field polarity could also take place on Mercury and lead to the formation of variously oriented local fields.

Incorrect: Discussions were held in Moscow on July 12, and in Washington on July 17.
Correct: Discussions were held in Moscow on July 12 and in Washington on July 17.

Do not use a comma to divide compound phrases of the type either ... or, neither ... nor, both ... and, between ... and, and from ... to.

Incorrect: These reflectors are used both for measuring the lengths of the optical paths, and for measuring the bare length.
Correct: These reflectors are used both for measuring the lengths of the optical paths and for measuring the bare length.

3.4.8  In a series containing three or more items, use a comma before and and or. Note that translators sometimes incorrectly omit and in a series when it is not in the Russian original.

The reaction produced water, carbon dioxide, and hydrogen.

The equation for this system is \( F = pVT \), where \( p \) is pressure, \( V \) is volume, and \( T \) is temperature.

3.4.9  Use commas to set off transitional adverbs and expressions (like however, therefore, consequently, thus, nevertheless, finally, on the contrary, on the other hand, in particular, in addition, as a rule) and expressions that introduce an illustration or example (like for example (e.g.), that is (i.e.), namely). When such words and phrases are used as conjunctive adverbs, connecting two independent clauses, they should be preceded by a semicolon (see Section 3.5.2).

This method fails, however, when the pressure drop is nonlinear.

He will travel through two countries, namely, France and England.

Many neural networks, for example, the Hopfield networks, tend to stabilize at the local energy minimum.

For transitional adverbs and expressions that are embedded in the sentence, the commas around them may be omitted if there is no distinct break in thought.

It is critical, therefore, that we reexamine these cost estimates. (distinct break in thought)
Changes are highlighted in yellow.

It is therefore critical that we reexamine these cost estimates. (*spoken with rising voice*)

When transitional adverbs and phrases precede the second part of a compound predicate, they are treated as interrupting expressions and are set off by two commas.

A mechanism should exist in the network that, on one hand, can control the competition of hypotheses and, on the other hand, can adaptively control the redistribution of the magnitudes of stimulation and retardation.

**3.4.10** Use a comma to introduce direct questions or quotations, but if the quotation is used as a subject, predicate nominative, or predicate adjective, or if it is not being presented as actual dialogue, a comma is not used. Note that, if the quotation is a sentence, it ordinarily begins with a capital letter; if it is a fragment, it does not. However, a colon is used to introduce a formal statement, extract, or speech in dialogue (generally more than one sentence).

Mary said, “I am leaving.”
“The computer is down” was the reply he feared.
We quote from the address: “It now seems appropriate …

**3.4.11** In order to avoid ambiguity, use a comma to indicate the omission of a word or words, and especially a word or words used earlier in the sentence. However, this construction is often difficult to read and should be avoided in the main text. If the meaning is clear without a comma, do not use one. Never use an em dash (as is done in Russian text) in this construction.

*Correct*
Common stocks are preferred by some investors; bonds, by others.

*Better*
Some investors preferred common stocks, and others preferred bonds.

*Correct*
One committee member was from Ohio, another from Pennsylvania, and a third from Oregon.

*Incorrect:* Hornblende is indicated by black triangles; mica—by white circles. [Russian punctuation carried over from translation.]

*Correct:* Hornblende is indicated by black triangles; mica, by white circles.

**3.4.12** Do not use a comma to represent a decimal point (translators often make this mistake).

**3.4.13** In names in text, use a comma before and after *Jr.* and *Sr.*, but not *II* or *III*.

Martin Luther King, Jr.  Nicholas II  W.A. Goddard III

In references, such names are formatted as follows:

King, M.L., Jr., ....  Goddard, W.A. III, ....

**3.4.14** Set off *etc.* with commas when it is used in running text.

The trucks deliver milk, eggs, cheese, etc., fresh daily.

**3.4.15** Dates should be written in the order month, day, year. If the day is not given, do not use a comma between the month and year. If the day is given, use a comma before the year, as well as
after the year within a sentence. The month may be abbreviated for space considerations in tables and figures; see Section 5.10 for the correct abbreviations.

June 1984 (not June, 1984 or June of 1984)
June 15, 1984 (not 15 June 1984)
June 15 (not June 15th)
July 4, 1996 (not July 04, 1996)

The first litter appeared on March 5, 1995, in animals that had just started to darken.

In a table: Feb. 1–9 (not 1. II–9. II)  If table space is insufficient, military style date may be used: 20 Sep 92 (first three letters of month without period)

3.4.16 Use commas to set off individual elements in addresses and names of geographical locations or political divisions.

Meetings will take place in St. Louis, Missouri, and Atlanta, Georgia.

The Shirshov Institute of Oceanology, Russian Academy of Sciences, will host the next annual conference.

3.4.17 Generally, do not use a comma to set off symbols, formulas, or variables. However, if the variable is long or the sentence is complex, it may be necessary to set off the variable for clarity.

Incorrect
Consequently, the radiation with energy, \(x\), was produced at the laser output.

Correct
Consequently, the radiation with energy \(x\) was produced at the laser output.

Also correct
The Gibbs free energy of formation of silicon dioxide under these conditions, \(\Delta_f G\), …

Note: For use of commas in chemical names, see Chemical Names and Symbols (Chapter 8).

3.4.18 A word, phrase, or clause that is in apposition to a noun is usually set off by commas, although dashes or parentheses are occasionally used instead.

Nelson, our commander, decided against the plan.

However, if the appositive is restrictive, it is not set off by commas.

Holly’s brother Jack was on time, but her brother Paul was late.

3.5 Semicolon

3.5.1 Use a semicolon to separate independent clauses if no conjunction is used.

Incorrect
All solvents were distilled from an appropriate drying agent, tetrahydrofuran and diethyl ether were also pretreated with activity I alumina.

Correct
All solvents were distilled from an appropriate drying agent; tetrahydrofuran and diethyl ether were also pretreated with activity I alumina.
3.5.2. A semicolon should be used between independent clauses joined by conjunctive adverbs such as *that is* (i.e.), *for example* (e.g.), *however, therefore, consequently, furthermore, then,* and *thus.* A comma should follow the conjunctive adverb in this situation.

The proposed intermediate is not easily accessible; therefore, the final product is observed initially.

**Note:** The subsequent independent clause may also be set off as a separate sentence (with the exception of the Latin abbreviations *i.e.* and *e.g.*).

We will assume that the law \( j = \sigma \cdot E \) is valid in the plasma; that is, the length to which the pulse is transmitted by an electron is much less than the characteristic size of the system.

We will assume that the law \( j = \sigma \cdot E \) is valid in the plasma. That is, the length to which the pulse is transmitted by an electron is much less than the characteristic size of the system.

3.5.3 Do not use a semicolon between dependent and independent clauses.

*Incorrect*
The activity on bromopyruvate was decreased; whereas the activity on pyruvate was enhanced.

*Correct*
The activity on bromopyruvate was decreased, whereas the activity on pyruvate was enhanced.

3.5.4. Use semicolons between three or more items in a series if at least one of the items already contains internal punctuation.

By the middle of next year, we will open new offices in Orlando, Florida; Phoenix, Arizona; and Columbus, Ohio.

This rule holds even if the only group containing the commas is the last in the series.

The compounds studied were methyl ethyl ketone; sodium benzoate; and acetic, benzoic, and cinnamic acids.

3.6 Colon

3.6.1 Do not use a colon in a sentence unless the sentence is grammatically complete to that point. Specifically, do not place a colon between a verb and its object, a preposition and its object, or before a restrictive element in a sentence.

The colons in the following sentences are *incorrect* and should be deleted:

The set of china includes: 12 dinner plates, 12 salad plates, and 12 cups and saucers.

The panel consists of: J.R. Smith, T.J. Jones, and A.K. Walker.

Equation (3) can be expressed in the form: \( y = a + bx + cx^2 \), where \( a, b, \) and \( c \) are coefficients.

3.6.2 Use a colon to separate titles and subtitles. In Russian titles, a period is often used, but a colon should be used in translated titles.

*The Tragic Dynasty: A History of the Romanovs*

Use the following format for numbered subtitles: *Title: 2. Subtitle* not *(Title. 2. Subtitle)*
3.6.3 Use a colon to introduce a word, phrase, complete sentence, or several complete sentences that illustrate, clarify, or expand upon the preceding information.

The book was poorly written: it lacked both unity and coherence. We now report a preliminary finding: no chemical shift changes were detected in the concentration range 0.1–10 M.

3.6.4 If the word following the colon introduces a complete sentence, it may be either lowercased or capitalized; while the former is the more common usage, the latter can be used when the sentence introduced by the colon is fairly lengthy and distinctly separate from the preceding information. If more than one sentence applies to the colon, then the word following the colon should be capitalized.

3.6.5 A colon is commonly used to introduce a list or series. If the series is made up of complete sentences, capitalize the first word of each sentence and end it with a period. If the series is made up of phrases or fragments, the first word should be lowercased (unless it is a proper noun) and the parts of the series should be separated by a comma or semicolon. When a list made up of complete sentences is blocked beneath running text, the first words should be capitalized and the last words terminated with a period (particularly when there are internal semicolons and/or periods). If blocked text is made up of sentence fragments, the first words may be either lowercased or capitalized.

Our conclusions are the following: Wide-angle X-ray scattering studies give us an accurate picture of structures up to 9 Å. Such studies do not permit the specification of defects, such as random ruptures of chains. The structural models defined are strongly supported by magnetic measurements.

The electron density was studied for the ground state of three groups of molecules: (1) methane–methanol–carbon dioxide, (2) water–hydrogen peroxide, and (3) ferrous oxide–ferric oxide.

The different statistical methods satisfy the following criteria:

The limit must be at least a 95% C.L. and come close to the desired 5% false exclusion rate of the Higgs boson hypothesis.

The order in which various channels are combined must not change the final limit.

The expected limit from combining two channels must exceed the limit from any single channel.

3.6.6 Use a colon in biblical citations and in expressions of ratio and time.

John 4:10 8:30 a.m. a ratio of 3 : 5

Note: A colon used to indicate a ratio is preceded and followed by a space.

3.6.7 If a list or series is introduced by such expressions as namely, for instance, for example, that is, or note, a colon may be used if the series consists of one or more grammatically complete (independent) clauses. In this case, the items of the series should be treated as complete sentences.

Because of supersymmetry, it has some further special properties, whose significance will
Changes are highlighted in yellow.

become clear later. Namely:

1. It is invariant under a $\mathbb{Z}_4$ symmetry.
2. It has a holomorphic structure.
3. It has a duality that connects the weak and strong coupling regimes.
4. The duality generalizes to an $SL(2, \mathbb{Z})$ symmetry.

3.7 Parentheses and Brackets

3.7.1 In correct usage, a parenthetic expression contains information that is subsidiary to the point that the sentence is making. The sentence does not depend on the information within the parentheses.

Thus, water-soluble complexes containing more than a threefold excess of polycation chain units (compared to negatively charged protein groups) have been found and studied.

Note: No punctuation mark should be placed directly before parenthetic material; if a break is required, the punctuation should be placed after the final parenthesis.

New social indicators of regional development (i.e., employment and the number, diversity and quality of jobs available), in addition to a thorough study of the present indicators, will be needed.

A mechanism involving the loss of a CH radical was proposed (see Fig. 1).

3.7.2 The parenthetic expression needs neither capitalization nor a final period, but may have a question mark, an exclamation point, a set of quotation marks, or a period after an abbreviation.

Years ago, someone (who was it?) told me about it.

Note: It is preferable not to use parenthetic expressions as isolated sentences. When this construction cannot be avoided, capitalize the first word and place the final punctuation within the parentheses.

The data are inconclusive. (Some researchers claimed a deviation in amounts of reaction products, but they were unable to duplicate the results in experiment.)

3.7.3 A combination of parentheses and dashes may be used to set off two parenthetic elements, one of which contains the other:

He had forgotten what caused their quarrel—something about the will, he suspected (it certainly wouldn’t be surprising!)—but he knew that they hadn’t spoken since.

3.7.4 Use a pair of parentheses to enumerate in running text. Do not use a hyphen or en dash after the number. These rules apply as well to figure captions and other parts of the text.

Three applications of this reaction are possible: (1) isomerization of sterically hindered aryl radicals, (2) enol–keto transformation, and (3) sigmatropic hydrogen shift.

For blocked text, either a pair of parentheses or a period following the number without parentheses is acceptable. The first words may be lowercased if no items contain complete sentences.

The following parameters were used
Changes are highlighted in yellow.

(1) The relative change in height of the $i$th rod and that of the reference rod as compared to the initial position of the rods; 
(2) The difference between the level of the soil surface at the $i$th rod and that at the reference rod;  
(3) The relative change in the level of the soil surface at the $i$th rod.

3.7.5 Use parentheses to enclose abbreviations that occur after their spelled-out form.

a ruling by the Federal Communications Commission (FCC)  
the manufacture and disposal of polyvinyl chloride (PVC)

3.7.6 Use parentheses to identify the trademark and manufacturer of reagents and equipment.

cobalt chloride (Mallinckrodt)  
a pH meter with a glass electrode (Corning)

3.7.7 Use parentheses without a space next to a function with its argument.

exp($-x$)

3.7.8 Use parentheses when citing an equation or formula in text. Keep the parentheses intact in multiple citations.

This theory is proven by (5)–(7).  
Taking into account (7), we have the following expression:  
and  
The equality of expressions (6)–(8) for atoms with ground state momentum …  
not  
The equality of expression (6–8) for atoms with ground state momentum …

3.7.9 In a figure caption, letters or numbers identifying panels of the figure or items within the figure should be in parentheses. In the figure itself, letters designating panels of the figure (but not items within the figure) should also be in parentheses, i.e., (a), (b), etc.

Fig. 1. Absorption spectra of (1) pure alkali–calcium silicate glasses and (2) the same glasses activated with 0.2 mol % Eu$_2$O$_3$. (3) Difference spectra of curves 1 and 2 for glasses with (a) sodium and (b) lithium as modifier.

Note how curves, spectra, etc., are treated in captions when specifically referred to as such. Also, note that parentheses are not used to refer to a panel of a figure or an item within a figure, chart, graph, photograph, etc., within text.

As can be seen from Figs. 2a–2c, this process leads to increasing instability.

Curve 1 shows the transition most clearly. [In the Word text: Curve @1 shows the transition most clearly.]

This transition is shown in Fig. 1a (curve 1). [In the Word text: This transition is shown in Fig.1a (curve @1).]

3.7.10 Use square brackets within quotation marks to indicate material that is not part of a direct quotation.
In the words of Sir William Lawrence Bragg, “The important thing in [physical] science is not so much to obtain new facts as to discover new ways of thinking about them.”

**Note:** Do not enclose ellipses in brackets.

3.8 **Hyphens**

3.8.1. Do not hyphenate most prefixes added to common nouns, even if a double letter results (except for prefixes resulting in double a or i, which are usually hyphenated). Note that most prefixes and suffixes are hyphenated when added to foreign words. The following prefixes are usually not hyphenated when added to common nouns; do not hyphenate with these prefixes unless the word is listed among the exceptions below or you find that the hyphenated version is preferred by *Webster’s* (British English uses far more hyphenation than American English). Pay attention to inconsistencies in this regard when you edit.

Changes are highlighted in yellow.

Note: If omitting the hyphen and closing up would change the meaning of the words, use a hyphen (e.g., re-cover and recover; un-ionize and unionize).

3.8.2 Do not hyphenate a common noun of less than three syllables when it is combined with the suffix -like, unless the noun ends in an l. Do hyphenate words of three or more syllables, as well as chemical and mineral names and symbols, when combined with -like.

perovskite-like graphite-like metal-like x-like but slitlike gridlike

3.8.3 Hyphenate the suffix -fold to a numeral, but not to a word.

25-fold but fivefold multifold severalfold

3.8.4 Hyphenate with the prefixes self- and quasi-.

self-confident self-hater quasi-equilibrium

However, in the case of quasi-, exceptions to this rule exist with respect to accepted terminology. Commonly met deviations from this rule should be in the respective journal appendixes.

quasiparticle quasicrystalline

3.8.5 Do not hyphenate a common noun and the suffixes -wide, -wise, -worthy, -proof, and -long.

worldwide piecewise trustworthy fireproof daylong

3.8.6 Do not hyphenate a directional word unless it is made up of more than two directional words.

northwest but north-northwest

3.8.7 Hyphenate prefixes and suffixes added to proper nouns, and retain the capital letter.

non-Freudian Kennedy-like anti-American

3.8.8 Hyphenate a prefix to a chemical name.

non-hydrogen bonding non-phenyl atoms

3.8.9 Hyphens with symbols should be used only when they form unit modifiers.

X rays but X-ray analysis B meson but B-meson decay
z axis but z-axis orientation d orbital σ bond

3.8.10 Hyphenate written-out compound numbers between twenty-one and ninety-nine (see Numeral Usage for when to write numbers out). The same applies to ordinal numbers. Hyphenate written-out fractions: one-half two-thirds three-fourths one-tenth nine-sixteenths

3.8.11 Compound words are two or more terms used to express a single idea and are listed in Webster's. Such compounds forming nouns are frequently not hyphenated, while those forming adjectives are hyphenated. This aspect of English is one of the most rapidly changing, especially as
it concerns scientific vocabulary: check the journal’s appendix and consult the scientific editor for exceptions and changes.

son-in-law  over-the-counter

Watch out for unnecessary hyphenation of two nouns not used as a unit modifier (i.e., as an adjective). Hyphenation is a device used in Russian to avoid declining the first word.

Интернет-кафе = Internet café  ток-шоу = talk show  Солт-Лейк-Сити = Salt Lake City

3.8.12 If a prefix or suffix is added to a compound, hyphenate it.

non-radiation-caused effects  pseudo-first-order reaction quasi-steady-state system

3.8.13 For use of hyphens in chemical names, see Chemical Names and Symbols.

3.8.14 Do not hyphenate ordinals.

not  3-rd  but  3rd  
not  i-th  but  ith

3.8.15 Use a hyphen to link compound family names and compound company names accepted as units (compare 3.10.6).

Lennard-Jones  Petrov-Vodkin  Levi-Civita
McGraw-Hill  Perkin-Elmer  Addison-Wesley

3.9 Hyphenation of Unit Modifiers

3.9.1 Hyphenate unit modifiers in order to avoid ambiguity. Unit modifiers are two or more words used as an adjective. They may consist of any of the following:

adjective + noun: high-speed printers  long-term bonds  a part-time job
noun + adjective: age-old problem  tax-exempt status  ice-cold water
noun + participle: law-abiding citizen  interest-bearing account  pear-shaped drop
adjective + participle: high-ranking official  smooth-talking operator  half-baked idea
adj. + noun + ed: flat-footed player  full-bodied brew  medium-sized room
adverb + participle: well-known method  ever-changing winds  much-needed hit
participle + adverb: worn-out equipment  scaled-down proposal  cooling-off phase
number + unit of measure: 25-g sample  5-cm thickness  2.5-ms delay
number + unit of measure + word: 3-year-old child  4-mm-thick layer
phrasal compound: up-to-date figures  step-by-step directions  would-be expert

Note: A number of adjective–noun combinations (such as real estate) and noun–noun combinations (such as life insurance) are actually well-established compound nouns serving as
adjectives. Since such expressions refer to well-known concepts or institutions and are easily grasped as a unit, they do not require a hyphen.

- social security number
- life insurance policy
- nuclear energy plan
- real estate tax

Note: Individual journals may elect not to hyphenate unit modifiers consisting of a number and an abbreviated unit of measure:

- 5 nm spacing
- 2500 Å wavelength
- 557.7 nm emission
- at 60 km altitude

Consult the given journal’s appendix for specific cases.

3.9.2 Hyphenate unit modifiers used as predicate adjectives. In general, only unit modifiers that consist of nouns and adjectives can be used as predicate adjectives.

In these cluster reactions, dehydrogenation is size-dependent.
The reaction is first-order.

3.9.3 Do not hyphenate unit modifiers in the following instances:

(1) if the first word is an adverb ending in -ly or very;
recently developed procedure  a very well studied hypothesis

(2) if the unit modifier is a chemical name;
barium sulfate precipitate  sodium hydroxide solution

(3) if it is a color combination where the first one modifies the second;
bluish green tint  dark red car  coal black surface

Note: do hyphenate when two colors are of equal value:
blue-green algae  red-green color blindness  yellow-green solution

(4) if one or more words in the unit modifier are a proper name;
Lewis acid catalysis  Monte Carlo method  Eastern European politics

Note: a suffix to a proper name should be hyphenated:
Schottky-type defects  Moscow-like prices

(5) if the first word in the unit modifier is a comparative or superlative.
higher temperature reactions  lowest frequency wavelengths

3.9.4 Do not hyphenate foreign phrases used as adjectives.
in vivo reactions  ad hoc committee  in situ evaluation

3.10 En Dashes
An en dash is twice as long as a hyphen and received its name from being the width of a typewritten letter \( n \). It is referred to in Russian as a “тире.” At the first stage, it is designated by two hyphens, i.e., \(--\).

3.10.1 Use an en dash without spaces to mean \textit{to} or \textit{through} with a span of numerals.

\begin{itemize}
\item 3–4 h Monday–Friday
\item Figs. 1–4
\item 5–50 kg
\item pp. 1759–1760
\end{itemize}

3.10.2 Do not use an en dash when the words \textit{from} or \textit{between} are used. Also, do not use an en dash to indicate a range of numbers expressed as words.

\begin{itemize}
\item from 500 to 600 mL
\item between 7 and 10 days
\item five or six samples (\textit{instead of} five–six samples)
\item four to seven days (\textit{instead of} four–seven days)
\end{itemize}

3.10.3 Do not use an en dash between two or more unit modifiers having the same base and a hyphen after each element; use \textit{to} or another linking word or symbol.

\begin{itemize}
\item 25–to 50-mg samples (\textit{not} 25–50-mg samples)
\item 0.5–to 10-cm tube (\textit{not} 0.5–10-cm tube)
\item high-, medium-, and low-frequency measurements
\end{itemize}

\textbf{Note:} The following is acceptable with abbreviated units of measure.

\begin{itemize}
\item 25–50 mg samples
\item a 0.5–10 cm tube
\end{itemize}

3.10.4 Do not use an en dash between two negative quantities or between a negative and positive quantity; use \textit{to}, or \textit{from} and \textit{to}, instead. Do not use an ellipsis.

\begin{itemize}
\item –10 to –50°C (\textit{not} –10…–50°C)
\item from –50 to –25°C
\item –10 to +10°C
\end{itemize}

3.10.5 Use an en dash to mean the equivalent of \textit{and} or \textit{to} in two-unit concepts, or when the preposition is omitted.

\begin{itemize}
\item structure–activity relationships
\item oxidation–reduction potential
\item cis–trans isomerization
\item nickel–cadmium battery
\item water–acetone solution
\item water–ethyl alcohol solution
\end{itemize}

3.10.6 Use an en dash to link the names of two people.

\begin{itemize}
\item Jahn–Teller effect
\item Lineweaver–Burk
\item Stern–Volmer plot
\item Beer–Lambert law
\end{itemize}

3.10.7 Use an en dash to indicate a chemical bond.

\begin{itemize}
\item hydrogen–hydrogen bond
\end{itemize}

3.10.8 Use an en dash for negative numbers and as a minus sign.

3.10.9 Use an en dash when adding a prefix or suffix to more than one word, i.e., to an open compound (see also 3.9.3, 8.12).

\begin{itemize}
\item pre–World War II history
\item copper oxide–based solution
\end{itemize}
3.11 Em Dashes

An em dash is three times as long as a hyphen and received its name from being the width of a typewritten letter \( m \). It is referred to in Russian as a “длинное тире.” At the first stage, it is designated by three hyphens, i.e., ---.

3.11.1 The em dash usually marks an abrupt change or break in the continuity of a sentence.

When in 1960 the stockpile was sold off—indeed dumped as a surplus—natural rubber sales were hard hit.

3.11.2 The em dash introduces a summary statement that follows a series of words or phrases.

Oil, steel, and wheat—these are the sinews of industrialization.

3.11.3 Use em dashes to set off words that could be otherwise misread.

Incorrect
All three experimental parameters, temperature, time, and concentration were strictly followed.

Correct
All three experimental parameters—temperature, time, and concentration—were strictly followed.

3.11.4 The em dash is used between the word Abstract and the beginning of the text of the abstract.

3.11.5 It is not recommended to use em dashes to separate phrases or nonrestrictive clauses if another form of punctuation can be used.

Incorrect: The singly charged complexes—which constituted bands 1 and 3—liberated maleate anion upon decomposition.
Correct: The singly charged complexes, which constituted bands 1 and 3, liberated maleate anion upon decomposition.

Note also that in translations from the Russian language em dashes tend to appear much more frequently than in the native English texts. It is recommended to consider rephrasing every sentence with em dashes when translating from Russian.

3.12 Quotation Marks

3.12.1 Quotation marks should be used for new words, words used in a new sense (such as technical terms used in a nonstandard sense), or words not used literally. Generally, use quotation marks only the first time the word appears in the text. Occasionally, it may be necessary to repeat the quotation marks throughout the text. Russian authors tend to use this punctuation more than Americans; you should discuss specific cases with the scientific editor and try to minimize the use of this awkward construction.

Plastocyanin is a soluble “blue” copper protein.
The integrated intensity of each diagonal in the spectrum is proportional to a “mixing coefficient.”

3.12.2 Use quotation marks to enclose short direct quotations.

In the book Megatrends, Naisbitt concludes that “We are moving from the specialist who is soon obsolete to the generalist who can adapt.”
3.12.3 At the first stage, longer quotations (extracts) of 50 words or more should be enclosed in braces and marked before and after with @ to indicate that they should be indented.

The American physicist Richard Feynman has already made this argument in his book *How Atoms Affect You*: @Everything is made of atoms. That is the key hypothesis. The most important hypothesis in all of biology, for example, is that everything that animals do, atoms do. In other words, there is nothing that living things do that cannot be understood from the point of view that they are made of atoms acting according to the laws of physics.@

3.12.4 In text, use quotation marks to enclose titles of poems, short stories, articles, lectures and papers read at meetings, dissertations and theses, manuscripts in collections, chapters of books, short musical compositions, and radio and TV programs (see also 3.17.2; References). Do not use quotation marks for names of laws, resolutions, and decrees (see also 4.3).

3.12.5 The official title of a conference is not enclosed in quotation marks:

4th International Conference on Fluidization

However, a substantive title given to a conference is enclosed in quotation marks:

“Dynamics of Heavy-Ion Collisions,” an international symposium on nuclear physics

3.12.6 The period and comma always fall within quotation marks (unlike in Russian). The colon and semicolon always fall outside quotation marks.

3.12.7 The following changes to direct quotations are permissible if necessary to ensure that a quoted passage fits smoothly into the text: (1) the initial letter may be changed to a capital or lowercase letter; (2) the final punctuation mark may be changed, and punctuation marks may be omitted where ellipsis points are used.

Grandmother remarked that “a stitch in time saves nine.”
As Grandmother often said, “A stitch in time saves nine.”

3.12.8 When a quotation is used as a syntactic part of a sentence, it may begin with a lowercase letter, even though the original is a complete sentence beginning with a capital letter; however, if the quotation is not syntactically dependent on the rest of the sentence, the initial letter is capitalized.

The economist’s angry retort is likely to be, “What do you mean? How can a policy work for the market?”
What is the meaning of a “market economy”?

3.12.9 Dashes, question marks, and exclamation points fall within quotation marks when they refer to the quoted matter only; they fall outside when they refer to the entire sentence.

The economist’s angry retort is likely to be, “What do you mean? How can a policy work for the market?”
What is the meaning of a “market economy”? 

3.12.10 When quoted material was originally written in English, the original source should always be consulted. In no case should the English quote be retranslated from the Russian translation.

3.12.11 Do not put the names of companies, organizations, or brand names in quotation marks. Rather, they should simply be capitalized.

NPO Plastmassy (*not* NPO “Plastmassy”)
Changes are highlighted in yellow.

Vostok Marine Biological Station (not “Vostok” Marine Biological Station)
a Spektr M-360 gas spectrometer (not a “Spektr” M-360 gas spectrometer)

Note: Commercial names of Russian companies should be transliterated, not translated. However, a few Russian companies have become well known in the West under a translated name: Norilsk Nickel, Unified Energy Systems (UES), Rostelecom.

3.13 Single Quotation Marks

3.13.1 Use single quotation marks to indicate quoted material that falls within double quotation marks. When both single and double quotation marks occur at the end of a sentence, the period typically falls within both sets of marks.

The witness said, “I distinctly heard him say ‘Don’t be late.’”

3.13.2 Philosophical and theological terms should be placed in single quotation marks. In such cases, all punctuation, including commas and periods, should be placed outside the quotation marks.

If such a procedure is justifiable, ‘agrees with’ must carry the sense of ‘is consistent with’.

3.14 Ellipsis

3.14.1 In the Word text, use @ to indicate an ellipsis. Do not use three periods. It is the practice of our journals not to put a space between an ellipsis and a following comma or a final period.

1, 2, 3, 4 …. not 1, 2, 3, 4 … .

3.14.2 Within a quotation, use an ellipsis to indicate deleted words or phrases. The ellipsis points are used in addition to other needed punctuation. Thus, if a period is contained on either side of or within the omitted passage, the result will be four dots. Each portion of text on either side of the ellipsis should be functionally a sentence. Do not enclose ellipses in brackets.

No science is immune to the infection of politics and the corruption of power …. The time has come to consider how we might bring about a separation, as complete as possible, between science and government in all countries.

Retain punctuation around ellipses if it helps to retain the sense of the passage.

The sound of the cornet, flute, … and all kinds of music … [comma indicates continuation of list]

3.15 Solidus (or Slash)

3.15.1 The solidus may be used as a symbol for per in abbreviated units of measure.

10 kg/cm²  2 m/s  kg/(m² s K)

3.15.2 The solidus may be used for electrode pairs, supported systems, heterostructures, systems of impurities, etc. In general, use a solidus to indicate an item that is not a mixture, but a heterogeneous structure, e.g., a binary or multicomponent system, an interface, or a local heterogeneity.

Ag/AgCl electrode  Pt/SiO₂ catalyst  Si/SiO₂ semiconductor
Changes are highlighted in yellow.

Pt/Pt–Rh thermocouple \( M^{m+/n} A B_m \) (system of impurities)

### 3.15.3 Avoid using a solidus between words in text.

**Incorrect**
Hot/cold extremes will damage the samples.

**Correct**
Hot and cold extremes will damage the samples.

**but**
The on/off switch was replaced.

**Note:** and/or constitutes acceptable usage in text.

### 3.16 Spacing

#### 3.16.1 Leave one space after periods, question marks, exclamation points, colons, semicolons, and commas.

#### 3.16.2 Leave a space before and after arithmetic signs in equations or mathematical operations with an element to the left and right (\(+\), \(-\), \(=\), \(<\), \(\leq\), \(\geq\), \(\pm\), etc.) with the exception of the division or fraction sign (/). In sub- and superscripts, the space may be omitted. An exception is computer codes, which sometimes may contain mathematical operations without spacing. For charge numbers and arithmetic operators with no element to the left of them, the arithmetic sign should be closed up to the number.

\[
\begin{align*}
\frac{<2}{a + b} & \quad \frac{\sim 5}{d < k} & \quad \frac{\ldots}{-x} & \quad \frac{\ldots}{-a} & \quad \frac{\ldots}{X = A/B} & \quad \frac{\ldots}{3 < 10^{11}} & \quad \text{Ca}^{2+} & \quad \text{ions}
\end{align*}
\]

#### 3.16.3 Do not leave a space between a function and the parentheses of its argument, but leave spaces between arguments.

\[
\begin{align*}
x(y) & \quad W(x, p) & \quad W(x, p, t)
\end{align*}
\]

#### 3.16.4 Leave a space between two units of measure, but not between a number and a symbol or symbols.

\[
\begin{align*}
25 \text{ P s} & \quad \text{or} & \quad 7.9 \text{ W h} & \quad \text{but} & \quad 5 \gamma 2t
\end{align*}
\]

#### 3.16.5 In text and references, do not leave a space between initials of a person’s name; leave one space between the final initial and the person’s last name. When the name appears in the heading, there should be one space between the initials and one space between the last initial and the last name.

**In text**
In 1952, I met M.A. Dubinskii at Moscow State University.

**In references**
Boichenko, A.M., Derzhiev, V.I., and Yakovlenko, S.I., ....

**In a main heading**
A. M. Boichenko, V. I. Derzhiev, and S. I. Yakovlenko

### 3.17 Italicization
Be aware that Russian writing makes far greater use of italicization than does English. Avoid using italicization in text except in the instances outlined below. Minimize the use of italicization for emphasis.

**Note:** For use of italics in references, see Chapter 10, References.

### 3.17.1 Translators and first-stage editors should indicate italicization, underlining, superscripting, subscripting, and bold type by placing @ before the item (and after it as well if the item consists of more than one unit). Thus, for

> Russian Journal of Inorganic Chemistry

To appear in the final text, write

@Russian Journal of Inorganic Chemistry@

### 3.17.2 Italicize titles of books, journals, magazines, newspapers, plays, movies, works of art, and musical compositions, as well as specific names of ships, aircraft, and spacecraft (but not designations of class or make).

In previous articles of *Biophysics* it was shown that …

The *Titanic* had been explored previously.

*but*

Saturn V rocket  Boeing 747

Note that conference titles should not be italicized in text. However, in references, a conference title is italicized, as is a book title.

### 3.17.3 Endings added to italicized words should be in roman type.

> five *Moscow Tribune*s and two *Cosmopolitan*s

Note that, at the first stage, the above should appear as follows:

five @Moscow Tribune@s and three @Cosmopolitan@s

### 3.17.4 Italicize words and letters when referred to as words and letters. Do not put them in quotation marks.

> The word *receive* is often misspelled.

> The g in *align* is silent.

### 3.17.5 Key terms in a discussion or technical terms (especially when accompanied by a definition) are often italicized on first use. Subsequently, they are set in roman type. For use of technical terms in nonstandard senses, see 3.12.1.

### 3.17.6 Italicize all variables and physical quantities, except when they represent vectors or are Greek or manuscript-style letters.

### 3.17.7 Foreign words and phrases that have not been naturalized in English are italicized. If a foreign word or phrase is in the main body of *Webster’s*, it should not be italicized. No exception to this rule can be made in an individual journal appendix.
Note: This also applies to the Latin abbreviation et al. in references.

3.17.8 Latin scientific names of genera, species, subspecies, and varieties (but not groups of higher rank, such as phyla, classes, orders, or families) are italicized. The name of the person or persons who proposed a specific or subspecific name is added in roman type and sometimes abbreviated. In the last example, the parentheses indicate that De Bary described the species but attributed it to a different genus.

- a thick-shelled American clam (*Mercenaria mercenaria*)
- *but*
  - the family Hominidae

*Trogon collaris puella*
*Molossus coibensis* J. A. Allen
*Quercus alba* L.
*Aureobasidium pullulans* (De Bary)

Other designations following generic, specific, or subspecific names are also set in roman type:

- *Viola* sp.
- *Rosa rugosa* var.

3.17.9 Italicize case titles in legal citations, both in full and shortened forms (*v.* for *versus*, however, is not italicized). Note that, in legal citations, *versus* is written as *v* in roman type.

- *Jones v. Massachusetts*
- The *Jones* case
- *Jones*

3.17.10 Capitalize and italicize the words *proof* and *corollary* when they are not numbered and when they introduce a corresponding example. In text, do not italicize or capitalize.

3.17.11 Numbers or lowercase letters referring to items within a figure (lines, curves, or other parts) should be italicized both in the figure and in text. Thus, in text: See curve *1*. However, letters indicating a panel in a figure should be left in roman type (see also 1.11.2).

- segment *a* of the chromosome shown in the figure
- Fig. *1a*

3.17.12 In italicized text, foreign words that are normally italicized should be written in roman type. However, conventionally italicized scientific words (e.g., genus and species) should always be italicized. For example, in a book title or a first- or second-level subheading, such words would appear as follows:

  *The Genome of Drosophila melanogaster*

3.17.13 Indices should be in italics if they represent variables, and physical quantities, axes, etc., and in roman if they represent abbreviations of words.

- \( K_i (i = 1, 2, ... , 20) \)
- \( N_A \) (\( A \) here denotes Avogadro’s number)

If unsure whether an index should be italicized, consult the journal’s appendix or the chief translator.

3.18 Boldface
Changes are highlighted in yellow.

3.18.1 Never use bold type for emphasis.

3.18.2 Definition [#], Theorem [#], Statement [#], Example [#], and Lemma [#] appear in bold and should be marked with @ at first stage.

   @Lemma 12@  @Theorem 11@

3.18.3 Roman numerals used to indicate chemical compounds should be marked with @ at first stage to indicate boldface type.

   The effects of compounds @I–X were studied in rats.

3.19 Diacritical Marks

   Below are some of the most common diacritical and accent marks, along with how they should be rendered in traditional first stage text.

   á = @a[acute]@  à = @a[tilde]@  ø = @l[slash]@  ø = @o[slash]@  ß = @a[double s]@  
   é = @e[breve]@  å = @a[umlaut]@  ñ = @n[tilde]@  ñ = @n[tilde]@  ï = @i[dotless]@
   ê = @e[circumflex]@  ã = @a[tilde]@  ï = @i[dotless]@  ï = @i[dotless]@  ï = @i[dotless]@
   â = @a[circumflex]@  ò = @o[umlaut]@  ø = @l[slash]@  ø = @o[slash]@  û = @u[umlaut]@
   ç = @c[cedilla]@  ê = @e[circumflex]@  õ = @o[tilde]@  õ = @o[tilde]@  ï = @i[dotless]@
   à = @a[grave]@  à = @a[umlaut]@  ë = @e[umlaut]@  ë = @e[umlaut]@
   Ŝ = @s[caron]@  Ŧ = @t[caron]@  Ŧ = @t[caron]@  Ŧ = @t[caron]@

4. CAPITALIZATION

4.1. In title capitalization (the title of the article and first-level subheadings), the first and last words and all nouns, pronouns, adjectives, verbs, adverbs, verbs, and subordinate conjunctions (if, because, as, that, etc.) are capitalized. Articles (a, an, the), coordinating conjunctions (and, but, or, for, nor), and prepositions, regardless of length, are not capitalized unless they are the first or last word of a title or subtitle. The word to in infinitives is also not capitalized unless it is the first or last word of a title or subtitle.

   How to Succeed in Business without Really Trying
   Redevelopment Proposal Is Not Expected to Be Approved
   A Home to Be Proud Of
   Abraham Lincoln—The Early Years
   The Treaty of Versailles: A Reexamination
   Mapping of the Chromosome of Bacteria *Erwinia carotovora* ssp. *atroseptica* (see 4.19)

   For capitalization in lists of references, see Chapter 10, References.

4.2. For hyphenated compounds appearing in a title, capitalize the first letter of words on either side of the hyphen. See examples below and examples of chemical names in Section 8.6.

   Up-To-Date Methods  Non-Christian Religions  Cosmic-Ray Background Radiation
   Self-Sustaining Reactions  Semi-Infinite Media  A Run-In with Authorities
   Medium-Sized Libraries  X-Ray Spectroscopy  Russian-Speaking Population

   Latin phrases in a title should be capitalized.

   In Situ Measurements  A Priori Data  Post Facto Analysis
4.3 For names of laws, resolutions, and decrees, capitalize all words except conjunctions, articles, and prepositions (do not use quotation marks). Note that, in the following examples, the word On is capitalized because it is the first word of the name of the law or resolution.

The Resolution On the Status and Goals of the Russian Academy of Sciences under the Present Conditions was announced at yesterday's meeting.

4.4 In text, capitalize X in X-ray unless specifically stated otherwise in the journal appendix as an exception; the X, however, still should be capitalized in titles and headings.

4.5 Capitalize such words as figure, table, and chart only when they refer to a specific numbered item. Thus,

Fig. 1 Chart IV Table 2

but

According to the chart on page 22 …

4.6 Do not capitalize words such as group, sample, and experiment, even when they are used with numbers. Groups of the periodic table are exceptions to this rule.

samples 3–7 experiment 2 groups 5a–5d but Group IV

4.7 Capitalize parts of a book when they refer to a specific number. Also, capitalize parts of an article when they are cross-referenced within the article. However, lowercase parts of a book when they are named in passing references. The word chapter is lowercased and spelled out in text; it may be abbreviated in parenthetic references.

Appendix 1 chapter 3 (ch. 3)

See Materials and Methods for a description of the reaction conditions.

but

In the introduction to Ivanov’s text …

4.8 Do not capitalize the abbreviation for page, even with a number.

4.9 Software terms designating specific units are generally in full capitals, although exceptions with initial capitals only also exist.

BASIC FORTRAN COBOL Pascal Microsoft Word

4.10 The first word after a colon (1) may be capitalized if it is the first word of a complete sentence and (2) should be capitalized if the element following the colon consists of more than one sentence or if it is a formal statement, a quotation, or a speech in dialogue.

4.11 Full names of armies, navies, regiments, battalions, corps, etc., as well as of wars and battles, are capitalized. Such words are lowercased when they stand alone, are used collectively in the plural, or are not part of an official title.

United States Army Allied armies
4.12 The names of awards and prizes are capitalized, as are specific names of medals and military awards.

- the Nobel Prize in medicine
- Nobel Peace Prize
- USSR State Prize
- Medal of Honor
- Congressional Medal

4.13 Derivatives and adjective forms of proper nouns are capitalized when used in their primary sense.

- Avogadro’s number
- nuclear Overhauser–Hodgkin’s disease
- Gaussian

However, four kinds of name-derived nouns are always lowercased:

1. units of measure (gauss, ampere);
2. particles (fermion, boson);
3. elements (einsteinium);
4. minerals (scheelite, fosterite).

4.14 Words designating global, national, regional, or local political divisions are capitalized when they are essential elements of specific names; however, they are usually lowercased when they precede a proper name or stand alone.

- the Russian Empire
- Leningrad Soviet
- the fall of an empire
- a meeting of soviets

4.15 Capitalize the names of historical events, some historical periods, and some cultural and political movements. When in doubt, consult Webster’s or the Chicago Manual of Style.

<table>
<thead>
<tr>
<th>Capitalized</th>
<th>Not Capitalized</th>
<th>(Not) Capitalized Based on Context</th>
</tr>
</thead>

<td>the Russian Revolution</td>
<td>neoclassicism</td>
<td>prohibition</td>
</tr>
<tr>
<td>Renaissance</td>
<td>socialism</td>
<td>cold war</td>
</tr>
<tr>
<td>the Yalta Conference</td>
<td>age of reason</td>
<td>communism</td>
</tr>
</tbody>
</table>

4.16 Personal titles are capitalized when they immediately precede a personal name or names and lowercased when used alone, in general contexts, or in apposition to a name. Following a name or names, such titles are generally lowercased, but in formal usage, such as in the main heading of a translation, acknowledgments, or lists of contributors, they are usually capitalized.

- General Eisenhower
- Mayors Hurley and Feinstein
- Tsar Nicholas II
- President Gray
- Corresponding Member A.A. Chernov
- Corresponding Members A.A. Chernov and I.I. Ivanov

*in a list of authors, etc.:

A.A. Chernov, Corresponding Member of the USSR Academy of Sciences
A.P. Kapitsa, Director of the Pacific Ocean Institute of Geology

in a general context:
A.A. Chernov, corresponding member of the USSR Academy of Sciences
A.P. Kapitsa, director of the Pacific Ocean Institute of Geology

All corresponding members were allowed to vote.
When Kapitsa became director of the Pacific Institute of Geology, he initiated reforms.

Always capitalize Academy when it refers to the Academy of Sciences; e.g., “All members of the Academy were present.”

Note: The names of academic degrees and honors should be capitalized when they follow a personal name, whether abbreviated or written in full:

Clyde M. Haverick, Doctor of Law  John K. Follett, MD

However, when academic degrees are referred to by means of such general terms as doctorate, doctoral, bachelor’s, candidate’s, or master of science, they are not capitalized.

4.17 Names of planets and their satellites, asteroids, stars, constellations, galaxies, and other celestial objects are capitalized; however, the words sun, earth, and moon are usually lowercased unless they occur with other astronomical names. Also, note that generic terms forming part of a specific name are not capitalized.

the Milky Way  Venus
Halley’s comet  the Andromeda galaxy

but  Her eyes were blinded by the sun.

4.18 Geological eras, periods, epochs, strata, and names of prehistoric divisions are capitalized.

Silurian period  Pleistocene epoch  Neolithic age  Cenozoic era

4.19 Capitalize genus names, but do not capitalize species names, even in titles. Capitalize names of groups higher than genus, but not those of subspecies and varieties.

Pneumococcus aureus  Siphonaria pectinata

Novel Metabolites of Bacillus subtilis

However, do not capitalize the adjective or plural form of a genus name unless it is at the beginning of a sentence.

amoeba bacilli  pneumococcal  mastodon

4.20 Capitalize foreign and Latin words if they appear at the beginning of a sentence or in a title. If a word is normally italicized but not capitalized, do not capitalize it unless it is the first word of a sentence or title.

4.21 Nouns and adjectives designating geographical location are often, although not always, capitalized:

the East; the Far East  but  eastern Vermont
Changes are highlighted in yellow.

the Western world; the Midwest but western Russia; a midwesterner

as political or cultural divisions:
Western Europe; Central Europe; Eastern Europe; North Africa; Southeast Asia

as geographical locations:
western Europe; central Europe; eastern Europe; northern Africa; southeastern Asia

4.22 Names of topographical features are capitalized. Also, a generic term, such as mountain, desert, river, etc., used as part of a name is also capitalized.

the Rocky Mountains the Painted Desert the Amazon River the Sea of Azov
North Pole Western Hemisphere Hudson River valley the Arctic

When a generic term is used in the plural following more than one name, it is lowercased:
the Caspian and Mediterranean seas the Sahara and Gobi deserts

When a generic term precedes more than one name, it is usually capitalized:
Lakes Michigan and Huron Mounts McKinley and Washington

When a generic term is used descriptively rather than as part of the name or is used alone, it is lowercased:
the valley of the Mississippi the Mongolian desert the Norwegian coast

4.23 While terms such as avenue, building, hotel, square, street, etc., are capitalized when part of a specific name, they are lowercased when they stand alone or follow two or more proper names.

Fifth Avenue Fifth and Seventh avenues
the Palace Hotel the Palace and National hotels
Times Square Washington and Rittenhouse squares

4.24 Full names of governmental and judicial bodies are generally capitalized, while adjectives or incomplete designations (except abbreviations) derived from them are usually not.

United Nations Security Council the Security Council the council
Chicago City Council city council council
General Assembly of Illinois Illinois legislature assembly state legislature
State Duma the Duma
Department of State State Department the department
Agency for International Development AID the agency
Court of King’s Bench the court the Court [only in this case is court capitalized when used alone]
United States Supreme Court the Supreme Court

Words such as administration, government, ministry, monarchy, and state are not usually capitalized.

4.25 In transliterated Cyrillic, follow Russian capitalization. Pronouns, days of the week, months, and most proper adjectives are lowercased. Geographical designations are lowercased except when they apply to formal institutions or formal political units.
4.26 Titles transliterated from the Russian should be capitalized as in the original, i.e., only the first word and proper nouns should be capitalized. Journal titles are an exception to this rule; the capitalization used by CASSI should be followed (English-language title capitalization). Please see also Appendix at the end for correct abbreviations of journals published by our publishing house.

4.27 Full official names of associations, societies, meetings, conferences, etc., are capitalized. A the preceding a name is lowercased in text, even when it is part of the official title. Words such as society, meeting, conference, etc., are lowercased when used alone.

The 4th International Conference on Fluidization; the conference “Dynamics of Heavy-Ion Collisions,” an international symposium on nuclear physics

4.28 Full titles of institutions and companies and their departments and divisions are capitalized. In some cases, especially when they might be mistaken, shortened versions of those titles are also capitalized.

The University of Chicago the Department of History the Law School
The Universities of Chicago and California Harvard and Northwestern Universities

5. ABBREVIATIONS

5.1 Use abbreviations and acronyms sparingly. If a very long name or term is repeated many times throughout a paper, an abbreviation is warranted. In such a case, place an abbreviation in parentheses following the spelled-out form the first time it appears in the text and use the abbreviation thereafter. Do not use the abbreviation first followed by the spelled-out form in parentheses. If an abbreviated term is used in the abstract, define it in the abstract and again in the text. Do not put spaces between the letters of abbreviations or acronyms. In an article, the plural form of an abbreviation must be designated with an “s” to differentiate it from the singular and adjective forms. If the term upon first mention appears in the plural, you should immediately give the plural form of the abbreviation.

According to the Food and Drug Administration (FDA) …
We studied induced magnetomotive forces (IMMFs).

5.2 Avoid abbreviations in the title of a paper unless they are used in the original or are commonly understood without explanation (e.g., DNA, NMR, IR, etc.)

5.3 Do not simply translate (or transliterate) Russian abbreviations and acronyms. In many cases, the English term must be written out entirely, or an acceptable English abbreviation must be used.

5.4 The following is an incomplete list of common abbreviations that are accepted and may be used in text without explanation. Other accepted abbreviations can be found in Webster’s.

Note: Use curl instead of rot
5.5 Below is a list of abbreviations of commonly used scientific units:

Note: The unit of measurement liter is to be written with a capital L, which is an SI standard and also helps to distinguish a lowercase l from the Arabic number 1.

**Examples:** milliliter → mL; microliter @[µ]l (µL)

Below is a list of abbreviations of mathematical functions:

\[
\begin{align*}
\sin x & \quad \csc x & \quad \sinh x & \quad \cosh x & \quad \log x \\
\arcsin x & \quad \arccsc x & \quad \arcsinh x & \quad \arccosh x & \quad \ln x \\
\cos x & \quad \sec x & \quad \cosh x & \quad \sech x & \quad \exp x \\
\arccos x & \quad \arcsec x & \quad \arccosh x & \quad \text{arcsech} x & \quad \text{sgn} x \\
\tan x & \quad \cosec x & \quad \tanh x & \quad \cosech x & \\
\arctan x & \quad \text{arcosec} x & \quad \text{arctanh} x & \quad \text{arcosech} x
\end{align*}
\]

Abbreviations that are common to a specific field may be permitted without identification in books and journals in that field only at the discretion of the scientific editor. For a guide to abbreviations for specific journals, see their appendixes.

Used alone or in running text, the words *latitude* and *longitude* are never abbreviated:

- the zone from ten to forty degrees north latitude
- from 10°30' north latitude to 10°30' south latitude

In technical work or in tables, designations of latitude and longitude may be abbreviated in any of the following ways:

- lat. 35°15’30” S
- lat. 35°15’30” N
- lat. 35°15’5” S
- lat. 35°15’5” N
- long. 45°12’30” E
- long. 45°12’30” W
- long. 45°12’5” E
- long. 45°12’5” E

Note that, in any of these systems, periods may be omitted after *lat.* and *long.*; these labels may also be dropped, since *E*, *W*, *N*, or *S* identifies the coordinate. The figures are always closed up, and there is a space before the compass direction.
The plane went down at 23°12′14″ S, 45°35′38″ E.
The eye of the hurricane was located near 30° N, 75° W.

5.9 Do not abbreviate the following in text: the words day, week, month, and year; days of the week; months not used with a date; personal titles not used with a name; and states not used with a city. In tables, accepted abbreviations of these words may be used. In a strict measurement sense in text, the abbreviation yr for year is acceptable.

5.10 Use the following abbreviations and spelled-out forms for months with a date in footnotes, tables, figure captions, bibliographies, and lists of literature cited.

|------|------|-----|------|-------|------|

In text, spell out all months with or without a specific day.

5.11 Use the following abbreviations for days of the week when necessary.

5.12 Use such abbreviations as US and USSR as adjectives only; spell out the United States and the Soviet Union as the noun forms.

US science policy chemical industry in the United States

Note that exceptions are in references and addresses, where the abbreviated form is needed.

5.13 Spell out and capitalize company and corporation as part of company names when they appear in a title or an author’s affiliation. Abbreviate them elsewhere in text. After the first mention, drop them entirely.

<table>
<thead>
<tr>

6. NUMERAL USAGE

6.1 Use numerals with units of time or measure, and use a space between the number and the unit (except with °, %, and $).

6 min 25 mL 0.20 g

but 12°C 50% $250

Note: Russian translators often, incorrectly, place the dollar sign after the numeral.

6.2 When measurements are used in a nontechnical sense in nonscientific text, spell them out.

If it takes you fifteen minutes to read this guide, you need to take more time.
Changes are highlighted in yellow.

6.3 In scientific text, use % for a percentage; in nonscientific text, write percent.

6.4 With items other than units of time or measure, use words for numbers less than or equal to 10; use numerals for 11 and above, unless the number is the first word of a sentence.

<table>
<thead>
<tr>
<th>three flasks</th>
<th>tenfold</th>
<th>but</th>
<th>30 flasks</th>
<th>20-fold</th>
</tr>
</thead>
<tbody>
<tr>
<td>2–3 weeks</td>
<td>9 days</td>
<td>a 6-day-old specimen</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

6.5 Numbers applicable to the same category should be treated alike within the same context. If you must use figures for some of the numbers in a sentence, use figures for all of the numbers in that category.

Of the samples tested, 13 were positive, 7 were negative, and 2 showed an inconclusive result.

6.6 Try not to begin a sentence with a numeral. Recast the sentence if possible; otherwise, spell out the number and the unit of measure if there is one.

Fifteen milliliters of supernatant was added to the reaction vessel.

6.7 Even when a sentence begins with a spelled-out number, follow the rules for all other numbers in the sentence.

Twenty-two micrograms of sample was dissolved in 20 mL of acid.

6.8 Use numerals for all the numbers in a series containing numbers above and below ten.

The subjects were examined after 5, 8, and 11 years.

6.9 Numerals are not spelled out when used in a mathematical sense.

The incidence of disease increased by a factor of 4.

6.10. For very large numbers in narrative text, use a combination of numerals and words. Do not do this for thousand.

| 1 million tons | 4.5 billion years | $15 million | $10 to $20 million | 85 000 km |

6.11. Use a half-space in numbers 10 000 and above; in Word documents (i.e., at the first stage), this appears as a whole space. Pay attention to this at second stage to make sure that a half-space appears and not a full space.

| 9 275 400 | 153 000 | 22 500 | but | 7600 |

Never use half-space and space in references unless the respective number is part of the cited article title.

6.12 Use numerals for decades, and form their plurals by adding an s (without an apostrophe). Use the full form of the number, not a contraction (unless colloquial style is specifically required).

Incorrect  
the ’50s  the 1890’s  the middle ’60’s  the 1960–1970s

Correct  
the ’50s  the 1890’s  the middle ’60’s  the 1960–1970s
6.13 When numerals are used as names rather than for enumeration, form their plurals by adding an apostrophe and s to avoid confusion with mathematical expressions.

Many 6’s were registered.

6.14 Use decimals rather than fractions with units of time or measure, except when doing so would imply an unwarranted accuracy.

3.5 h  not  3 1/2 h

6.15 In nonscientific text, spell out and hyphenate fractions.

one-quarter of the population

6.16 In text, spell out the ordinals first through tenth; use numerals for 11th and succeeding ordinals. Never add ordinal endings to roman numerals. Do not hyphenate numerals and ordinal endings. For a range of ordinal numbers: 31st–40th days (not 31–40th days).

Note: An ordinal may not be spelled out if it is part of an accepted formulation of a name (e.g., the title of a conference). Also, in references, ordinals are not spelled out when they refer to an edition of a book.

6.17 Do not add ordinal endings to numbers in dates.

6.18 For lists of phrases or sentences, use consecutive numerals in parentheses. Always use two parentheses, not one.

Some advantages of these materials are (1) their electrical properties after pyrolysis, (2) their ability to be modified chemically before pyrolysis, and (3) their abundance and low cost.

The major conclusions are the following: (1) We have further validated the utility of molecular mechanical methods in simulating the kinetics of these reactions. (2) A comparison of the calculated structures with available X-ray structures revealed satisfactory agreement. (3) The combined use of different theoretical approaches permitted characterization of the properties of a new isomer.

Note: To avoid confusion with numbered equations in surrounding text, lowercased Roman numerals (i.e., i, ii, iii, iv, etc.) may be used instead of numerals.

6.19 When two numbered items are cited in narrative, use and. However, use a comma within brackets or parentheses when two references are cited.

Figs. 1 and 2 but Lewis [12, 13] found that …

Note: For equations, the parentheses are part of the name of the equation.

It can be seen in (1) and (2) that … not It can be seen in (1, 2) that …

6.20 Use an en dash with three or more numbered items in a series, both in narrative and in parentheses.

Tables 2–4 show that … Past results [27–31] indicate that …
6.21 Use a period, not a comma, for decimals. Use an initial zero before the decimal.

<table>
<thead>
<tr>
<th>Incorrect</th>
<th>Correct</th>
</tr>
</thead>
<tbody>
<tr>
<td>0,001</td>
<td>0.001</td>
</tr>
</tbody>
</table>

6.22 When numbers are on a line, the comma is followed by a space; when numbers are in superscripts or subscripts, the comma is not followed by a space. This style is strictly a typesetting convention.

13, 14, 27, 115, and 146  

but  

$X_{1.2}$  

$Y^{1.4}$

6.23 Clock time designation. Use numerals with *a.m.* and *p.m.*

6:30 a.m.  
9:45 p.m.  
06:30 UT  
21:45 UT

7. UNITS OF MEASURE

7.1 Use metric and SI (International System) units. Abbreviations for SI units are included in Abbreviations. Some multiplying prefixes and their abbreviations follow:

<table>
<thead>
<tr>
<th>Prefix</th>
<th>Symbol</th>
<th>Factor</th>
</tr>
</thead>
<tbody>
<tr>
<td>a</td>
<td>atto</td>
<td>$10^{-18}$</td>
</tr>
<tr>

<td>$10^{12}$</td>
</tr>
<tr>
<td>P</td>
<td>peta</td>
<td>$10^{15}$</td>
</tr>
<tr>
<td>E</td>
<td>exa</td>
<td>$10^{18}$</td>
</tr>
</tbody>
</table>

7.2 Abbreviate the unit of measure when it appears with a numeral; leave a space between the number and the unit of measure, except when they form a unit modifier, in which case use a hyphen between them.

500 mL NaOH  

but  

500-mL flask

However, there are some exceptions to this rule. For instance, a 10 to 100 K temperature range. This is journal-specific and should be indicated in the respective journal’s appendix.

7.3. Do not use the abbreviated form of simple units of measure with indefinite or spelled-out numbers in running text.

5 Hz  

a few hertz  

30 m  

several tens of meters  

five hours  

but  

a few MeV

12 million hectares  

12 500 000 ha

7.4 Do not use plurals for abbreviated units of measure.

50 mg  

not  

50 mgs

7.5 In ranges and series, retain only the final unit of measure.

10–12 mg  

5, 10, and 20 kV  

25–30%  

30, 60, and 90°C
Note: The degree sign is an exception when it indicates angles:
30°, 60°, and 90° rotations

7.6 Hyphenate unit modifiers containing a number, a unit of measure, and a word.

3-year-old child 4-mm-thick layer

7.7 When a sentence starts with a specific quantity, spell it out, along with the unit of measure.

Twenty-five milliliters of acetone was added.

However, it is preferable to recast the sentence:

Acetone (25 mL) was added.

7.8 Even when a sentence starts with a spelled-out quantity, use numerals when appropriate in the rest of the sentence.

Twenty milliliters of acetone and 5 mL of HCl were added.

7.9 Use the percent symbol with a number, without a space, except in cases where the number that it modifies has been spelled out in the text.

25% 45–50% but Four percent of cases …

Note: When the percent symbol is used in unit abbreviations, it is preceded by a space (e.g., at %, mol %, vol %, wt %).

7.10 Do not use the degree symbol with the Kelvin scale.

7.11 Use °C with no space after a number and no space between the degree symbol and the C.

7.12 For angle measurements, use the degree symbol closed up to the number.

7.13 In column headings of tables and in axis labels of figures, abbreviate units of measure.

8. CHEMICAL NAMES AND SYMBOLS

8.1 The names of chemical compounds consist of locants, descriptors, and syllabic portions. Locants and descriptors can be numbers, element symbols, small capital letters, Greek letters, roman letters, italic words and letters, or combinations of these. The syllabic portions of chemical names are just like other common nouns: they are set in roman type, are lowercased in text, are capitalized at the beginnings of sentences, and are hyphenated only when they do not fit completely on one line.

8.2 Use a comma without a space between numerical locants, element-symbol locants, and Greek locants.

1,2-dinitrobutane N,N-dimethylacetamide
Changes are highlighted in yellow.

N,4-dichlorocyclohexanepropionic acid

A comma without a space should also be used in cases such as the following:

(K,Na)SO₄  not  (K, Na)SO₄

8.3 Use a hyphen to separate locants and descriptors from the syllabic portion of the name. Do not use a hyphen in chemical names if it does not separate a locant or descriptor from the syllabic portion.

1,2-benzoylbenzoic acid  N,N'-dimethylurea  β-endorphin

8.4 The following are set in italic type and should be marked with @:

(1) positional prefixes (para-, ortho-, and meta-; often abbreviated as p-, o-, and m-);

ortho-toluamide (also o-toluamide) 5-nitro-m-xylene  p-toluenesulfonamide

Note: If ortho or meta are used not as positional prefixes but to indicate a type of structure or compound, they should not be italicized.

an ortho structure orthophosphoric acid

(2) stereoisomer descriptors (cis-, trans-, gauche-, etc.);

cis-11-eicosenoic acid  trans,trans-2,4-nonadienal  trans-2,cis-6-nonadienal

(3) chemical symbols used to denote attachment to an atom.

N,N'-diethylaniline  O-isopropylxanthic acid, potassium salt

8.5 Chemical names and nonproprietary drug names are not capitalized in text unless they are the first word in a sentence. Then, the first letter of the syllabic portion is capitalized, but not the locant, descriptor, or positional prefix.

<table>
<thead>
<tr>
<th>In text</th>
<th>At beginning of sentence</th>

<td>erythro-β-Hydroxyaspartic Acid</td>
</tr>
<tr>
<td>poly(butyl phthalate)</td>
<td>Poly(butyl phthalate)</td>
<td>Poly(butyl phthalate)</td>
</tr>
</tbody>
</table>

Note: These rules also hold for words such as β particle.

8.6 Multiplying prefixes are set in roman type and closed up to the word. They are capitalized in headings and titles.

Latin Prefixes
di, tri, tetra, penta, hexa, hepta, octa, nona, deca

Greek Prefixes
Changes are highlighted in yellow.

bis, tris, tetrakis, pentakis, hexakis, heptakis, octakis, nonakis, dekakis

8.7 In polymer nomenclature, *co, alt, b, g, r,* and *m* are italicized; in newer polymer nomenclature, the words *block, graft, cross, inter,* and *blend* are also italicized when they appear with the chemical name or formula. They are never capitalized.

- poly(styrene-*co*-butadiene)
- poly(ethylene-*alt*-carbon monoxide)
- polystyrene-*block*-polybutadiene
- poly(*cross*-butadiene)

8.8 Greek letters, not the spelled-out forms, are used in chemical and drug names.

- β-naphthol  
  *not* beta naphthol

8.9 Numerals separated by periods within square brackets are used in names of bridges and spiro alicyclic compounds.

- bicyclo[3.2.0]heptane
- spiro[4.5]decane

8.10 Italic letters within square brackets are used for names of polycyclic aromatic compounds.

- dibenz[a,j]anthracene
- 1H-benz[de]naphthacene

8.11 Optical rotational signs are indicated by plus and minus signs in parentheses and are hyphenated to the chemical name.

- (+)-glucose
- (−)-tartaric acid

8.12 In general, chemical names made into unit modifiers are not hyphenated. If a prefix or suffix is added, an en dash is used (see Section 3.10.8).

- nucleic acid content
- amino acid level  
  *but* barium sulfate–containing precipitate
- sodium hydroxide solution

8.13 Trade names and patented medicines are spelled with an initial capital letter; they are not italicized. The trademark or patent symbol is omitted.

- Teflon M
- Vaseline

8.14 Isotopes are indicated with a numeric superscript preceding the symbol for the element.

- H$_{2}^{18}$O
- $^{29}$Si NMR spectrum

8.15 Both chemical symbols and element names may be used in text. In simple constructions, they should not be mixed.

- NaCl  
  *or* sodium chloride  
  *not* Na chloride

However, it is acceptable to refer to *NaCl* and *sodium chloride* within the same paper.

8.16 For longer or more complex constructions, chemical symbols and element names can be mixed.
Changes are highlighted in yellow.

Na phthalocyanate  
Na, K, Cs, and Rb chlorides

8.17 Symbols for chemical elements are written in roman type with an initial capital letter as individual atoms and as parts of formulas.

Ca  C  H  He  HCl  NaOH  HgSO₄

8.18 The spelled-out names of chemical elements and formulas are also written in roman type, but they are treated as common nouns.

calcium  carbon  hydrogen  helium  
hydrochloric acid  sodium hydroxide  mercuric sulfate

8.19 Use numerals when discussing positions in chemical structures.

Incorrect  Correct

carbon-7  carbon in the 7-position

8.20 To count atoms, use a subscript with the element symbol, but spell out the number if you spell out the element name.

a six-carbon ring

9. NAMES AND ADDRESSES

9.1 Titles

9.1.1 Personal titles are capitalized when referring to specific individuals; however, when used alone or in general contexts, they are lowercased (see Chapter 4, Capitalization).

9.1.2 The following is a list of common personal titles often encountered in Interperiodica texts, with their correct translation and abbreviation (if any).

<table>
<thead>
<tr>

<td>Senior Researcher</td>
<td>---</td>
</tr>
</tbody>
</table>
PhD should not be used as an equivalent of Candidate of Sciences for a person receiving the degree within the Russian system of higher education. Phys.–Math. and other such combinations should be written with an en dash.

9.2 Names and Addresses

9.2.1 The following is the format for formulating names and addresses in Interperiodica publications: name [paragraph], chair or department, institute or university, branch, street and number, city, oblast, zip code, and country. If an e-mail address is supplied by the authors, it should appear on a separate line below the street address. If some of the above information is missing, it may be skipped.

O. V. Sen’ko
Institute of Macromolecular Chemistry, National Academy of Sciences of Ukraine, Khar’kovskoe sh. 48, Kiev, 252660 Ukraine

V. D. Mazurov
Institute of Mechanics and Mathematics, Ural Branch, Russian Academy of Sciences, Yekaterinburg, Russia
e-mail: vdm@immran.ekb.ru

For autonomous regions that have declared their sovereignty, write the index before the region, followed by a comma and Russia.

Institute of Chemistry, Bashkir Research Center, pr. Oktyabrya 71, Ufa, 450054 Bashkortostan, Russia

For Moscow State University, use the following format:

 [Name of faculty], Moscow State University, Moscow, [postal index] Russia

Do not indicate either Vorob’evy or Leninskiye Gory or Lomonosov.

Note: Use transliteration in street addresses: ulitsa (ul.), ploshchad’ (pl.), prospekt (pr.), pereulok (per.), shosse (sh.), naberezhnaya (nab.), bul’var (bul’v.), raion, trakt, tupik, proezd, and oblast. Do not capitalize these words. Write the street name and number in the order it would be written in Russian.

Incorrect
22 Vavilov ul. Mira pr. 143
Correct
ul. Vavilova 22 pr. Mira 143

A street name such as 2-я Baumanskaya улица should be written as Vtoraya Baumanskaya ul. and not as 2-ya Baumanskaya ul.

9.2.2 Generally, names and addresses of institutes should be given according to the list in the appendix to this style guide; thus, check this list before translating the names of institutes yourself. Note that, in some cases, an author may specify that additional information be included in an address. Addresses of institutes should be translated according to the following models:
(1) If the name of the institute includes the name of a scholar, the scholar’s name should come first in the translation (but do not include the scholar’s initials).

<table>
<thead>
<tr>
<th>Russian Original</th>
<th>English Translation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Институт теоретической физики им. Л.Д. Ландау</td>
<td>Landau Institute of Theoretical Physics</td>
</tr>
</tbody>
</table>

(2) If the name of the institute includes a location but no scholar’s name, the location should come first in the translation.

<table>
<thead>
<tr>
<th>Russian Original</th>
<th>English Translation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Московский технический университет</td>
<td>Moscow Technical University</td>
</tr>
</tbody>
</table>

(3) If the name of the institute includes both a location and a scholar’s name, the scholar’s name should come first in the translation, and the location should follow the institute after a comma.

<table>
<thead>
<tr>
<th>Russian Original</th>
<th>English Translation</th>
</tr>
</thead>
<tbody>
<tr>
<td>С.-Петербургский институт ядерной физики им. Б.П. Константинова</td>
<td>Konstantinov Institute of Nuclear Physics, St. Petersburg</td>
</tr>
</tbody>
</table>

(4) If the institute, factory, or center includes a commercial name, the commercial name comes last and is not placed in quotation marks. Commercial names are transliterated, not translated, including abbreviations such as AO (Joint-Stock Company), TOO (Limited Liability Company), and NPO (Research and Production Association).

<table>
<thead>
<tr>
<th>Russian Original</th>
<th>English Translation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Научно-учебный центр «Робототехника» АО Цвет</td>
<td>Robototekhnika Research Center AO Tsvet</td>
</tr>
</tbody>
</table>

Inform quality control of changes or additions to be made to the address appendix.

9.2.3 Translate "отделение" of the Russian Academy of Sciences as "branch", not "division": Ural Branch, Siberian Branch, Far East Branch, etc.

10. TRADITIONAL INTERPERIODICA REFERENCES

10.1 References in Text

10.1.1 Use a number in brackets when citing references in text. If cited directly, the author’s name should be referred to without brackets, followed by the reference number in brackets. If cited indirectly, the reference should whenever possible be placed at the end of the sentence. Both of these styles may be used within a single article.

It was found that, after dehydration, the substance appeared as large blue crystals [9].

These results were also found by Ivanov et al. [3].

Note 1: In direct citations, if there are more than two authors, the name of the first author should be given, followed by et al. Et al. is not used in lists of references unless it appears in the original work.

Note 2: For the author, date method of citing (метод "автор–год"), see 10.1.8.
Changes are highlighted in yellow.

10.1.2 Use a number in parentheses when citing equations, reactions, and formulas. Abbreviate *equation* as Eq. (Eqs. for plural) before a numbered equation unless it is the first word of a sentence. Do not abbreviate other words such as *expression*, *formula*, and *reaction* or capitalize them unless they are the first word of a sentence. The references listed below can also be referred to simply by writing the number in parentheses.

As Eq. (1) shows …
As can be seen from (1) …
The equality expressions (6)–(8) for atoms with ground state momentum …
Taking (7) into account, we have the following expression …

**Note:** Definite articles should not be used with numbered expressions.

<table>
<thead>
<tr>
<th>Description</th>
<th>Example</th>
<th>Rule</th>
</tr>
</thead>
<tbody>
<tr>
<td>Eq. (5)</td>
<td><em>not</em> the Eq. 5</td>
<td></td>
</tr>
<tr>
<td>inequality (8)</td>
<td><em>not</em> the inequality (8)</td>
<td></td>
</tr>
<tr>
<td>condition (1)</td>
<td><em>not</em> the condition (1)</td>
<td></td>
</tr>
</tbody>
</table>

10.1.3 Use a comma within brackets or parentheses when two references are cited, but use an en dash for three or more in sequence. Note the following acceptable variations:

- [30, 31]
- [30, vol. 2, no. 5]
- [30, pp. 7–10, 31]
- [30–32]
- [30, Chapter 2]

10.1.4 Tables and figures are always capitalized and followed by a number when they refer to an item in the text. Use *and* when two are listed, but use an en dash without spaces for three or more in a sequence. The following variations are acceptable:

**references to tables and figures in text:**
- Table 1
- Tables 1 and 2
- Tables 1–3
- Fig. 2
- Figs. 1, 2, and 4
- Figs. 1–3 and 5–7
- Fig. 1, curves 1 and 2
- Fig. 3; Fig. 4, curve 1
- Figs. 3 and 4, curves 1
- Fig. 1, curves 1–3

**parenthetic references in text:**
- (Tables 1, 2)
- (Tables 2–5)
- (Figs. 1–3, 5–7)
- (Fig. 3; Fig. 4, curve 1)
- (Tables 2–5)

**Note:** *Figure* is always abbreviated unless it occurs at the beginning of a sentence or refers to an unnumbered figure. For a series of tables and figures listed in parentheses, *and* is not used.

10.1.5 Use consecutive numerals for figures, tables, schemes, structures, and references.

10.1.6 At the first mention of a person’s name, it is acceptable to use the person’s initials and last name. All subsequent references should use only the person’s last name unless the initials are needed to distinguish between two people with the same last name.
10.1.7 When referring in text to a non-Russian author, ensure as far as possible that the correct spelling of the author’s name as it would appear in English is followed, whether the language is originally in the Latin alphabet or must be romanized, as Japanese and Chinese.

<table>
<thead>
<tr>
<th>Name</th>
<th>Correct Spelling</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yashima</td>
<td>not Yasima</td>
</tr>
<tr>
<td>Ishizawa</td>
<td>not Isizava</td>
</tr>
<tr>
<td>Yoshimura</td>
<td>not Esimura</td>
</tr>
<tr>
<td>Hirano</td>
<td>not Khirano</td>
</tr>
<tr>
<td>Zhou</td>
<td>not Chzhou</td>
</tr>
</tbody>
</table>

This rule should also be followed for references originally published in some language other than Russian or English. In references to works originally published in Russian, the author's name should be transliterated regardless of how it would ordinarily be spelled in English. In references to works published in English, the spelling used by the publisher should be retained.

10.1.8 Handling Citations in the Text in the author–date (автор–год) method

A. In the author-date method both elements of the citation are enclosed within parentheses and separated by a comma:

Before proceeding with a more detailed discussion of our methods of analysis, we will describe the system of scaling quantitative scores (Smith, 1990).

Preferably, the citation should stand just within a mark of punctuation. If this is impractical, however, it should be inserted at a logical break in the sentence:

Various investigators (Stromberg, 2010; Marx and Engels, 2011) have reported findings at variance with the foregoing.

If the author has just been mentioned, it is not necessary to repeat his name in the citation:

This coefficient has been taken from the heavy-ion scattering experiments of Bromley, Kuehner, and Almquist (1960).

B. When reference has to be made to a particular page or section of a book, or to a particular equation or the like, this should be done at the point of citation; see examples below:

(White, 2007, p. 178)
(Petrov and Smirnov, 2003, Eq. (87))

C. Works by one author should list the surname of the author and the year of publication:

(Ivanov, 2005)

Works by two authors should list the two surnames, separated by the conjunction and, and followed by the year of publication:

(Ivanov and Petrov, 2010)
Changes are highlighted in yellow.

A work by three or more authors, for instance, by Ivanov, Petrov, Sidorov, and Smirnov, would be as follows:

(Ivanov et al., 2005)

If another work of the same date that would also be abbreviated “Ivanov et al.” is cited or if there are several works with the same authorship and date in the list of references, they should be cited as follows:

(Ivanov et al., 2005a)
(Ivanov et al., 2005b)

and

(Ivanov, 2005a)
(Ivanov, 2005b),

respectively. In that case the years in the list of references should also be supplemented with letters a, b, etc.

10.2 List of References: General

Important note: Format for references in ex-AIP journals is different from traditional Interperiodica journals. See Chapter 11, Ex-AIP References.

10.2.1 For titles of sources in English, including titles of books, journals, and names of conferences, use title capitalization as described by section 4.1. Always capitalize the first word in the title and subtitle, and capitalize all other words except for articles, prepositions, and conjunctions. Use this style also for translations of foreign titles. For titles given in a foreign language (including transliterated titles), follow the rules of capitalization for that language.

For titles of articles, book chapters, dissertations, on-line articles, patents, conference abstracts and papers, preprints, deposited articles, unpublished materials, use capitalization of the normal body text. Examples can be found in Memo of February 1, 2013.

10.2.2 For book titles, article titles, etc., use of hyphens and dashes should follow the original, even if such usage contradicts this style guide.

10.2.3 Remember to indicate all special formatting at first stage by placing @ at the beginning and end of the item to be so formatted, as shown in the following examples:

Gould, S.J., @Hens’ teeth and horses’ toes,@....
Chaplin, C., Keaton, B., Abbott, B., et al., Abstracts of Papers, @V Conference on Workplace Injuries,@....

Note: @ is placed after the punctuation following the item, as punctuation (other than parentheses) immediately following an item placed in italic or bold type should also be italic or bold.

10.2.4 Cite all authors. Only if listed as such in the original should you use et al.
10.2.5 Spelling of authors’ names in references to works published in a certain language should follow the original, even if an author is foreign and his or her other publications are cited with a different spelling.

10.2.6 When the author’s name includes a suffix such as Jr., Sr., II, III, etc., the suffix is retained when the name is inverted for indexing, but it is placed after the initials; a comma is placed between the initials and Jr. and Sr., but not between the initials and roman numerals.

10.2.7 If the publisher lists more than one city, give only the first. The University of California Press prefers the use of Berkeley and Los Angeles in references to its publications. If the place of publication is not widely known, the abbreviation of the state name should follow it (use the standard text abbreviation, not the postal abbreviation). When Cambridge is given as the place of publication, it is assumed that Cambridge, England, is meant unless otherwise indicated (e.g., Harvard or MIT is mentioned or Mass. is included in the publication information).

10.2.8 Russian book publishers should be transliterated, not translated. If the name is long, a CASSI-style abbreviation may be used. Avoid the use of acronym-like abbreviations, whenever possible. If an acronym abbreviation is used, a translation enclosed in parentheses is permitted. In general, a shortened version of the publisher’s name is used, and, whenever possible, words such as Company, Inc., Publisher, Verlag, Izdatel’stvo, and Press are omitted. Note that university presses (outside of Russia) are an exception to this rule, since books may be published by a university or the university press of the same name—two entities. For English language university presses, abbreviate university (Univ.), but write the rest of the name in full. Also, use izd. for izdatel’stvo in lists of references when deleting it would entail a change in the Russian declension. Some common book publishers are listed below.

- Academic
- Addison-Wesley
- Akad. Nauk SSSR
- Blackwell
- Cambridge Univ. Press
- Elsevier
- Energoatomizdat
- Freeman
- Gidrometeoizdat
- Gordon & Breach
- Harper & Row
- Harwood
- Izd. Standartov (not Standartov)
- Inostrannaya Literatura
- Lesnaya Promyshlennost’
- Macmillan
- Marcel Dekker
- McGraw-Hill
- Mir
- MIT Press
- Nauka
- Naukova Dumka
- Nauka i Tekhnika
- Navuka i Tekhnika
- North-Holland
- Oxford Univ. Press
- Pergamon
- Plenum
- Prentice Hall
- Reidel
- Radio i Svyaz’
- Ross. Akad. Nauk
- Springer-Verlag
- Univ. of Chicago Press
- Univ. of Pennsylvania Press
- Van Nostrand
- Vysshaya Shkola
- Wiley
- World Sci.

Note: Preprints and dissertations are the only forms of references that cite the name of the publisher in translation rather than in transliteration.
10.2.9 The following is a list of common abbreviations and translations in references.

<table>
<thead>
<tr>
<th>Abbreviation</th>
<th>Translation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Abstract</td>

</tr>
<tr>
<td>Указатель</td>
<td>index</td>
</tr>
</tbody>
</table>

10.2.10 In page spans, use all digits (e.g., 2022–2134).

10.2.11. Do not use *ibid*. The full information must be repeated.

10.2.12 The following prescriptions for the formulation of references will not cover every possible situation. The goal in formulating a reference is to make it possible for a reader to find the information cited. Include all the basic publication information in a format closest to the appropriate one among those shown here.

10.3 Books

10.3.1 Book references should appear as follows: (1) Author’s Name [see formulation of authors’ names below], (2) Title of Chapter [optional], (3) *Title of Book* (4) (Translation of Title) [if applicable], (5) Editor(s), (6) City: (7) Publisher, (8) year of publication, (9) volume, (10) edition [if not first], (11) chapter, (12) page(s).

In the publishing information, only include the country if the city is obscure. For cities in the United States that are not well known, add the state if known and omit USA. It is preferable to use the state abbreviations listed in the abbreviation appendix in *Webster’s*, instead of the two-letter postal abbreviations.

If a reference to a Russian book includes the total number of pages, do not include this information when translating this reference into English.

10.3.2 The title of a book should be capitalized according to the rules for the language in which it is written (see also 10.2.1). In French titles, only the first word and proper nouns are capitalized. In German titles, the first word and nouns are capitalized.
10.3.3 A work should be cited in its original language. Thus, if the work cited is a translation into Russian, cite the original work instead of the translation, using the following format. Do not simply follow a reference with *(Russian translation)*, unless the original of the work cannot be found.

10.3.4 When no facts of publication are available for a book, *n.p., n.d.* (no place, no date) may be used to indicate that neither could be found.

10.3.5 When citing an article from a collection of articles, substitute the article name, if available, for the chapter. If the name of the editor of the collection is not available, the word *in* may be added (in roman type, without a colon) before the title of the collection to avoid ambiguity.

10.3.6 A multivolume work is cited as follows:

Inclusive dates should be given for a several-volume work published over a number of years, if the entire work is cited.

When only one of several volumes is listed, the general title may be given first, followed by the volume number and title, or the volume title may be given first and followed by the volume number and general title.

Volume numbers for books are always given in arabic numerals, even when they appear as roman numerals in the book.

10.3.7 A series title may indicate the publishing agency, the subject of the series, or both. This title should be treated like any other title, although not italicized. The number of the volume should follow the series title; they should be separated by a comma if the title is complete without the number. The name of the series editor may be included but is generally omitted.

Series cited in the *Chemical Abstracts Service Source Index* (CASSI) [http://cassi.cas.org/search.jsp](http://cassi.cas.org/search.jsp), including the many *Itogi nauki i tekhniki* series, should be formatted according to the CASSI format. For example, *Itogi nauki i tekhniki, seriya: Fizicheskaya khimiya, kinetika* should appear as follows:
10.4 Journals

10.4.1 Items for references to articles in journals or periodicals should appear in the following order: (1) Author’s Name, (2) Title of Paper [in English, whether translated or not], (3) Title of Journal [in original language], (4) year of publication, (5) volume number [always given in arabic numerals], (6) issue number, (7) page number(s).

An issue containing several numbers should be formatted as is the second example above.

**Note 1:** If the title of a paper in a journal is in a language other than Russian or English, leave it in the original language rather than translating it. Выпуск should not be translated as issue. In some journals выпуск may refer to either volume or number and can often be determined from context. In most journals, выпуск and номер are used interchangeably; they are synonymous and should simply be translated as no.

In German articles: B. → vol.; H. → issue; N. → no.; S. → p.

**Note 2:** The translated versions of journals published by Interperiodica should be cited if this information is available from http://www.maik.ru/ or http://www.springerlink.com/.

Incorrect (outdated) format:

Correct format:

10.4.2 All journals that are listed in *CASSI* should be abbreviated as they appear there. (Exception: the journals *Nature*, *Evolution*, and *Science* may appear without the city name in parentheses.) Check the journal appendices for accepted reference abbreviations of common journals for each Interperiodica publication. One-word journals are never abbreviated in *CASSI*. Prepositions and articles are almost never used in *CASSI* abbreviated titles. If a journal is not listed, you may abbreviate the title based on a similar journal abbreviation. If the title is written out in full because no abbreviated title is listed in *CASSI*, the title should follow English capitalization rules. Note the following common abbreviations.

<table>

Zh. Zhurnal

For journals that contain a city name after them in parentheses (in order to avoid confusion with another journal of the same name), the city name is not italicized.

*Hypertension* (Dallas), … *Fiz. Tverd. Tela* (S.-Peterburg), …

Please see Appendix at the end of this document for correct abbreviations of journals published by our publishing house.
10.4.3 Do not delete DOI in the reference if provided by the author. For the format, see subsection 10.13.

10.5 Patents

10.5.1 (1) Name of Patent Holder, (2) Number of Patent or Inventor’s Certificate, (3) *Publication in Which Patent was Published*, (4) year of patent or publication, (5) volume number, (6) issue number, (7) page number(s).

The format for an unpublished patent is as follows:

10.5.2 The following national abbreviations are commonly used in patent citations: RF (Russian Federation), EEC (European Community), Fr. (French), FRG (German), Jpn. (Japan), UK (United Kingdom), and US (United States).

10.6 Dissertations

10.6.1 (1) Author’s Name, (2) Title of Dissertation (if available), (3) *Cand. Sci./Doctoral (Faculty) Dissertation*, (4) City: (5) Publisher [if Russian, give in English], (6) year of publication, (7) page number(s).

Note the following abbreviations used to indicate the faculty associated with the dissertation.

- Agric. (Agriculture)
- Biol. (Biology)
- Chem. (Chemistry)
- Econ. (Economics)
- Eng. (Engineering (технические науки))
- Geol. (Geology)
- Geogr. (Geography)
- Math. (Mathematics)
- Med. (Medicine)
- Mineral. (Mineralogy)
- Phys. (Physics)

Use an en dash to indicate joint subject area: *Cand. Sci. (Geol.–Mineral.) Dissertation*

10.6.2 Both candidates and doctors write a dissertation, not a thesis.

10.6.3. In citing dissertations, *avtoreferat* should be translated as extended abstract.

However, you will often not be able to tell whether it is a dissertation or only the extended abstract being cited. In this case, cite it as a dissertation.

10.7 Meeting Papers
10.7.1  (1) Author’s Name, (2) Title of Paper [if no title, use *Abstracts of Papers* in roman type], (3) *Name of Meeting or Conference*, (4) (Translation of Name) [if applicable], (5) City, (6) year, (7) volume number, (8) issue number, (9) page number(s).

**Note:** Never turn roman numerals into ordinals; e.g., XX Conference on High-Energy Physics, *not* XXth Conference…. In general, the form of a numeral in a conference title should not be changed, even in a translation of the title.

10.7.2. Meeting papers published as a book with publication information given.

Author, Title of paper, *Proc. ... Conference* (Place, year), city: publisher, year, page(s).

You may see a book title listed together with conference proceedings (often in the original version: *Book Title. Proc. ... Conference*).

*Book Title* (Proc. ... Conference, city, year), city: publisher, year, page(s).

10.8  Preprints

10.8.1  (1) Author’s Name, (2) Title of Paper [in English], (3) *Preprint of* (4) *Name of Institution* [in English], (5) City, (6) year, (7) preprint no., (8) page(s).

10.9  GOST (Soviet/Russian State Standards)

10.9.1  (1) *GOST* (State Standard) (2) *no. of standard:* (3) *Title/Subject of Regulation* [in English], (4) year (if available).

10.10  Unpublished Materials

10.10.1  Accepted for publication but not yet published:

For a book, the publisher may be included if known.

10.10.2  Submitted but not yet accepted:

**10.10.3** Personal communications:

**10.11 Material Presented Orally**

**10.11.1** The following format should be used for papers presented at a meeting but not published in proceedings:

Note that the name of the conference is not italicized here, since it is not the title of a book (i.e., published conference proceedings). The title of the paper, capitalized as any other title, may be given after the presenter's name and should be followed by a period.

**10.12 Depositions**

**10.13 Internet-Based Resources—DOIs and URLs:**

**10.13.1** Используйте следующий формат для оформления DOI:

I. Полноценная (содержащая все необходимые элементы цитирования) ссылка на опубликованную статью:

формат: &lt;ссылка в формате журнала&gt;. Затем ставится точка. После этого следует слово "doi" и номер. После номера точки не ставится (формат HSG):

II. Если статья еще не опубликована, то не указываются, том, номер и страницы. Все остальное оформляется по тому же принципу (формат HSG):

III. Если ссылка оформляется в тексте в виде "автор–год", то есть в виде (Slifka and Whitton, 2002), то предполагаемый год публикации необходимо указывать в этом случае:

IV. Ссылка на электронный журнал, где нет данных о страницах: указывается том, год, номер, страницы (если они есть). Всё остальное оформляется также:
Changes are highlighted in yellow.

10.13.2 Используйте следующий формат для оформления ссылок на URL:

Примеры:

11. EX-AIP REFERENCES

11.1 General

This format for references applies to the following American Institute of Physics journals.

*Acoustical Physics*  *Physics of Atomic Nuclei*
*Astronomy Letters*  *Semiconductors*
*Astronomy Reports*  *Physics of the Solid State*
*Crystallography Reports*  *Technical Physics*
*Doklady—Physics*  *Technical Physics Letters*
*Optics and Spectroscopy*  *Journal of Experimental and Theoretical Physics Letters*
*Plasma Physics Reports*  *Journal of Experimental and Theoretical Physics*

11.2 References are numbered both in citations in the text and in the References section (as according to Chapter 10).

11.3 The transliteration system is the same as traditional Interperiodica.

11.4 The following rules apply for references to journals:

- Author’s initials go before the surname with a space between the initials. Use and between the last two authors. All authors listed in the original reference should be cited.
• The name of the journal is written in the standard CASSI-abbreviated form in plain text instead of italics.
• The volume number follows the journal title in bold without a preceding comma and without the word vol. At first stage, the volume number is enclosed by @.
• If the page numbering is continuous throughout the volume, the issue number is not indicated. In this case, the first page number of the article follows the volume number separated by a comma but without the word p. If the page numbering is not continuous, the issue number is written in parentheses in plain text following the volume number with a comma placed after the issue number, followed by the page number. In both cases, the year of publication follows the page number in parentheses.

Examples:

• If the volume number is missing, the issue number is indicated instead as shown by the following example: J. Appl. Phys., No. 12, 5151 (1973).
• For a Russian journal previously translated by AIP and now translated by MAIK “Nauka/Interperiodica,” the translation journal should be cited instead of the original journal.

Examples:

Please see Appendix at the end of this document for correct abbreviations of journals published by our publishing house.

11.5 The following rules apply for references to books:

• Authors are cited in the same way as in 11.4.
• The title of the book is written in italics. If the book is originally published in Russian, only the English translation of the title is cited and after citation the original language may be indicated in square brackets, e.g.: [in Russian]. Note, however, that this is not required if the language is obvious from the publisher's name and place of publication and is applicable only to the books.
• Any subsequent edition after the first edition is mentioned following the title.
• The publication information follows the title (and edition) in parentheses in the order publisher, city, year. The publisher’s name is generally written in a standard shortened form.
• Volume number (Vol.), part number (Part), chapter number (Chap.), and page numbers (pp.) follow the publication information.

Examples:

If information is available about the publication of a Russian book translated into English, French, or German, the publication information of the original and translated work can also be cited. The same idea applies to a book translated into Russian. In all cases, the publication information of the original work is obligatory, and information of the translated work is optional.

**Examples:**

11.6 The following format applies for references to unpublished materials:

**Examples:**

11.7 The following format applies for references to patents:

**Example:**

11.8 The following format applies for references to dissertations:

**Examples:**

11.9 The following format applies for references to preprints:

**Example:**
1. A. P. Serebrov and N. V. Romanenko, Preprint No. 2194, PIYaF RAN (St. Petersburg Inst. of Nuclear Physics, Russian Academy of Sciences, 1997).

11.10 The following format applies to references to meeting papers:

The title of a conference and its place and date are italicized. Publication information (name, city, and year) follows in parentheses. The first page number of the cited material is then given separated by a comma.

11.11. The following format applies to references with DOI and URLs.

DOI:

URL:

12. "EBSCO" REFERENCES

12.1. Формат ссылок по EBSCO совпадает с форматом ссылок, описанном в разделе 11 за исключением того, что Формат ссылок по EBSCO допускает указание названия статей в журналах и сборниках, а также указание как первой, так и последней страницы цитируемой работы. Примеры:

При переводе необходимо использовать два дефиса вместо тире и выделять полужирный шрифт символами @.

Kommersant, Nov. 18 (2003).
При наличии в русской версии ссылки названия неопубликованного издания его перевод включается и в английскую версию.

Название конференции, семинара, школы и т.д., на которые были представлены материалы, выделяется курсивом:

V. Belozerov et al., submitted to *Eur. Phys. J.* A.

12.5. Ссылки на карты и атласы

*Geothermal Map of the USSR*, Ed. by F. A. Makarenko (Geological Institute, Academy of Sciences of the USSR, Moscow, 1972).

12.6. Ссылки на депонированные рукописи

Указываются инициалы и фамилия автора(-ов), выделенное курсивом название рукописи, транслитерированное сокращение названия учреждения, депонировавшего рукопись, номер, место и дата депонирования рукописи:

12.7. Комплексные ссылки – это ссылки, представленные в виде списка из нескольких ссылок. Такой вид ссылок крайне нежелателен. Если вы видите, что в каком-либо журнале они повторяются часто, просьба сообщить об этом начальнику службы переводов по электронной почте. В переводе первой из ссылок, приведенных в русской версии, указывается ссылка на журнал. Далее следуют разделенные точкой с запятой ссылки на другие источники:

При ссылке на одного и того же автора, на одну и ту же группу авторов, либо на один журнал каждая из ссылок входящих в состав комплексной ссылки должна быть полной. Повторяющаяся информация должна полностью дублироваться.

12.8. При возникновении вопросов по оформлению, можно попросить в отделе переводов отдельную инструкцию.

12.9. Оформление ссылок на DOI и Интернет-ресурсы необходимо следовать правилам, аналогичным тем, которые приведены в разделе 10.13.

Примеры оформления ссылок на DOI:

Если нет данных о страницах:

Примеры ссылок на URL:

## APPENDIX: List of correct abbreviations of journals published by Pleiades and Allerton
